I mean this is kind of pointless is it not?

1. If it's cracked it's like leaked, and/or going to be banned soon
2. Riot ID's are machine linked, new machines are required to enter codes. I.E. nobody can log into this without original email access.

Thanks for the share regardless.

Weird,

A: Obv if cracked its leaked. Anything that's cracked has been leaked. It's been bruteforced and logged into.

B: I can login and play games on any of my cracked accounts without any concern.

I actually found a smurf site that sells unverified's for \$5.00 so I bought an account already but I will refer to this thread if I ever feel like testing out a League bot or something. (I've been thinking about setting up a smurf account/botted accounts/verified accounts store) Talked to one of my friends who is Diamond 2 and he's just stopping playing League and focused on a smurf shop and he makes hundreds a day and just runs League bots on servers.

Are you able to obtain several, sellable, unverified OR verified accounts?
Experience in either: Wordpress, HTML, Graphics, Botting, Sales?
You have any experience with League bots or botting in general?

<https://elixirbot.com/about/>
<https://www.myporobot.com/>
<https://github.com/Skinz3/League-of-Legends-Bot>

Two major ones I'll be working with, I believe Elixir and Poro have better UI, setup, features and github one is free.

- 1: Yes
- 2: Botting/Sales
- 3: Yes

I don't think they're the best bots around though...

As far as I know they are the most reputable, but I mean if you know of some better ones...
