Thread: [Bitrat is lost after computer restart](#)

199xdz - March 9, 2021, 8:09 am

I tried BitRat on a VM and it worked perfectly, but I restart the VM, I lose the client.

I checked the task manager and didn't see the Rat after I restarted the computer, Please help me to solve the problem and thank you guys

Did you crypt it with persistence option?

if you dont have crypted ur exe file, then use the start-up option in Bitrat builder

Com Puer - March 10, 2021, 11:15 am

Facing same issue man. But waiting for support from support team. from date 10-02-2021 to till....

Stetsed - March 10, 2021, 11:24 am

Enable the "Install" option.

Do0ks - March 10, 2021, 11:41 am

It's probably because it works in memory, never touching the hard drive (kinda like meterpreter) so when a device is restarted, the memory is cleared removing the payload. You'll have to use "persistence" or maybe an install option, which will store it on the hard disk.

Sigma - March 10, 2021, 2:29 pm

The most likely answer is the persistence build option was not enabled, or your crypter doesn't have that feature.

Fire_Star - March 11, 2021, 6:51 am

Make sure You are Enabling Startup/Installation.

most likely you didnt use bitrat startup and you didnt add it within your crypter as well

To make this work u gotta Check' install ' type any name u want for file name and folder name.

Build the file, once built open Binder on Bitrat select Execute option To Memory (Default is from disk) Add your file you built earlier and bind it. Now run the file on VM and test with restart. Now it should work..
