Title says it all, I won't be too specific but if you're a front end developer looking for a project or something to work on please reply to this post and I'll give you a message!

Hey,

I have tons of projects on the go many of which have the potential of scaling to be high earning platforms or niches. I'm a bit of an entrepreneur with a light background in: HTML, Photoshop, CSS, Wordpress (any many other apps, including IPB, MyBB, XenForo, etc) and I have created projects in VB.net, C++, Java (RSPS) and have also dabbled in creating CPA (Cost-Per-Action) websites such as "fake" Wordpress themes and plugins site. I have experience with: VPS, SSH, Linux, Ubuntu, and more.

I am not a developer, I know enough to get me by and make modifications I need. If you have ideas for a project or something or want to chat a bit more hit me up.
