Transparent proxies

Code Transparent proxies are standard proxy servers that do not alter user information and leave it in its original format. So, they reveal IP addresses.

Transparent proxies handle all HTTP traffic, and a user need not adjust any personal settings.

These proxies enable a user to accelerate access to websites defined by him - mostly, to frequently visited locations. Performance is increased by caching content. Transparent proxies commonly operate faster than elite and anonymous proxy servers as they reduce upstream bandwidth usage.

Employers apply this kind of proxies for restricting access to specific resources (social networks, etc.).

Anonymous proxies

Code As for caching, anonymous proxies have the same strengths as transparent servers. Besides, they offer another undeniable advantage represented in their name, that is, anonymity. The number of anonymity proxy users is heavily increasing, since confidentiality on the Internet means that your computer is secured from hacking, data loss/corruption and other malicious actions.

Anonymous proxies hide user info during web surfing, and randomly modify an IP-address. The resulting IP-address is not registered anywhere due to a simple fact: the value of HTTP_X_FORWARDED_FOR is not forwarded to the end-website.

Elite proxies

Code Using an elite proxy is the most advanced degree of security as it provides the best protection and privacy on the Internet.

Elite proxies are your ideal disguise. This means that you leave no traces of using a proxy server. Your IP address will be fully hidden. The HTTP_X_FORWARDED_FOR, HTTP_PROXY_CONNECTION and HTTP_VIA headers are not forwarded at all. A host is not communicated either an IP address or a usage of the proxy. In this regard, elite proxies excel other proxy servers.

Elite proxies have a shortcoming: The REMOTE_ADDR header saves a proxy's IP-address. So, when forwarding packets of cookies stored from your surfing without an elite proxy, websites will not identify you. Want to avoid this? Clean cache and cookies in advance.
