Thread: [GET IP ADDRESS OF SOMEONE EASILY](#)

Juifer - March 16, 2021, 11:51 am

First go to the next URL: <https://grabify.link/>

Then, enter a URL that you want to redirect the victim to. I recomend to put a Facebook photo URL, a Youtube Video URL... Think things yourself. Click on generate link.

After that, click on `Change Domain/make custom link` to modify the link generated by grabify to a custom link. You have A LOT of choices, like yoütube, starbucks.bio... Make the link credible please.

Check the "Hide bots" option or you will have some random IP'S from traffic bots.

Once the link is generated just copy it

Now it's time to talk to Mr. I Want That IP !! Start a conversation by chatting with Mr IP and once you are comfortable send the link generated and do some social engineering (have you seen this video of kittens? Do you remember when we went that summer to the beach and we made that cool photo? THINK THINGS).

Once he/she click in the link he/she will be redirected to the link you have entered in grabify, and you will have your IP in the control panel of the web page. And most importantly, Mr IP will not have seen anything weird in the way.

Congratulations !! Now you know the IP address
