WHAT IS THE ACCOUNT CRACKING?!

Cracking" is the act of obtaining unauthorized access into a computer system without the user's permission and knowledge. Cracking doesn't require extensive hacking knowledge and capabilities, but rather a persistence and the dogged repetition of tricks that exploit common weaknesses in a targeted system or account!

so this is a question, what is cracking used for?!

for example, you don't have money to buy expensive game's! and also you really want to play that game! so you can crack other people account and use them for free!

HOW WE CAN CRACK ACCOUNTS?!

account cracking almost a simple process! you just need to put Email and Password on Login webpage and if the email & pass was correct you can access to the account and do but never you want and if it's incorrect you need to use other email and password! for that you need to use crackers, checker/cracker is a program to check all email: pass to the login page! and if a some of them was correct, program give it to you as Hit
you need to use crackers/checkers and combo list:

WHAT IS A COMBOLIST AND HOW TO MAKE IT?

Combolist is actually info that you need to put into a Login page to access the account! we have 2 type of combos!

Email:Password = yourname@Email.com:admin123

User:Password = yourname:admin123

you need to use E:P for the site's that you need an email to log in at it same about U:P combo!

E:P to site's like origin, facebook, Spotify, Uplay, ETC

U:P to site's like Steam, Instagram, and also you can use both E:P and U:P to same site's! like Instagram, origin, and more

we have 3 methods to get ComboList!

1- dumping combo's from Databases User SQLI Dumper!

2- Leech Combos from sites like Pastebin!

3- buy combos from guys who sell it!

for the first method we looking after this post!

the second method it's so easy! you just need to download PastebinLeecher, put your keyword and leeching combos!

How to make combo using SQLI Dumper

WHAT IS THE SENTRYMBA AND HOW IT'S WORK?!

Sentry MBA: A Tale Of The Most Popular Credential Stuffing Attack Tool

if you want to crack specific site account but you didn't find any cracker for that site you can use sentryMBA and make a config for that site and start attacking them!

also making config for sentry doesn't easy you can watch this video it will help you a lot.

THE WAYS TO CRACK ACCOUNT?!

there are just a few ways to crack accounts!

1- using crackers/checkers to crack accounts

2- using sentryMBA or Openbullet (is best for newbies) for cracking!

3- using AIO for MailAccess Cracking! (the Easy way)

WHAT SITE'S ACTUALLY DO AGAINST CRACKERS?!

some of them try hard to make crackers broken just like PSN ... but crackers do they ways and try to find a bypass!

these are some issues in cracking

– IM NOT ROBOT! (GOOGLE RECAPTCHA) And Captcha(you can bypass it with SentryMBA) for Recaptcha there are some site's that you can pay them for bypassing recaptcha like DBC, 2captcha, ETC ETC

– Account 2step verification

– Account Guard(Email, Phone)(Steam)

– some of them get account limited if the passenger access to the account like Paypal

HOW WE CAN BE SAFE AGAINST CRACKERS?

– don't tell anyone your main password!

– don't click on any link!

– don't use public email and password for your account!

– don't use easy passwords for your social media accounts

– don't trust anyone!

– don't download any app! run them on VM or Sandboxie

IS THIS GOOD TO CRACKING ON OUR LAPTOP OR COMPUTER?

– I always say don't use your own PC for cracking and stuff like this! why?!

cause cracking need HQ speed Internet and traffic

– your IP address will be ban by google

– take a lot of time (For example using NLbrute can spend time about 23H or +)

– can take serious damage on your PC! (this happens on my own)

so what we can do for cracking!?

you need to buy RDP/VPS from databases! like Amazon, 1&1, GoDaddy, AmazingRDP, ETC ETC

What IS A VPS/RDP AND HOW TO USE THEM?

Remote Desktop is a program that allows you to connect to your Windows VPS machine from the remote location and allow you to take a complete control of that virtual machine.

the virtual machine is just like other PC's and laptops, it has windows but! it has more power and more speed than your own computer! you can crack any type of account with that faster/safer

PROXY?!

A proxy server is a dedicated computer or a software system running on a computer that acts as an intermediary between an endpoint device, such as a computer, and another server from which a user or client is requesting a service

for example! you test about 10 email and password on random login page! and the site gets your IP address ban Pepe that's why you need to use Proxies!

we have some Proxies Types and levels!

HTTP

HTTPS

SOCKS 5/4

Anonymous

An anonymous proxy does not send your real IP address in the HTTP_X_FORWARDED_FOR header, instead, it submits the IP address of the proxy or is just blank.

Transparent

A transparent proxy sends your real IP address in the HTTP_X_FORWARDED_FOR header, this means a website that does not only determine your REMOTE_ADDR but also checks for specific proxy headers will still know your real IP address.

ELITE

An elite proxy only sends REMOTE_ADDR header, the other headers are blank/empty, hence making you seem like a regular internet user who is not using a proxy at all.

egoolsen - *March 17, 2021, 9:13 am*

Great guide man, thanks for taking the time to share this

Juifer - *March 17, 2021, 9:14 am*

No problem at all, If you need anything to get started (Combos, proxies etc) just let me know!

asterixx-g - *October 12, 2021, 9:16 am*

Thanks very much - it gives me the bigger perspective.

Tekno23 - *October 14, 2021, 9:18 am*

Thx for this great tutorial! But I think it is better for the tutorial that you write where can download the cracking programs! Nevertheless, thank you very much for the tutorial
