Thread: [Footer not at bottom of the page where there isn't enough content \[Fix included\]](#)

**Exalted** - March 26, 2021, 8:04 am

Alright, so I've been using a high-resolution laptop for a while now and keep getting annoyed by the footer not sticking to the bottom on pages where there isn't enough content.

Here are some examples:

Here's some CSS to overwrite this behavior (Needs to be tested on lower-resolution screens):

```
Code @media (min-width: 768px) {  
  body{  
    min-height:100vh;  
    margin:0;  
    position:relative;  
  }  
  body::after {  
    content: "";  
    display: block;  
    height: 75px;  
  }  
  #footer {  
    position: absolute;  
    bottom: 0;  
    width: 100%;  
  }  
}
```

This will make the footer behave as it should:

Can we get this added to the global CSS file?

If not, I also made this as userscript for the people that also experience this annoyance:

```
Code // ==UserScript==  
// @name      HackForums Footer Fix  
// @namespace  https://hackforums.net/
```

```
// @version    0.1
// @description HackForums Footer Fix
// @author     Exalted/4541508
// @match      https://hackforums.net/*
// @grant      GM_addStyle
// @run-at     document-start
// ==/UserScript==
```

```
(function() { 'use strict'; GM_addStyle(`@media (min-width: 768px) {body{ min-height:100vh;
margin:0; position:relative; } body::after { content: "; display: block; height: 75px; } #footer { position:
absolute; bottom: 0; width: 100%; }}
`))();
Thanks.
```

We'll review your adjustment.

Thanks for reporting.
