Thread: [Blockchain.com vs Coinbase](#)

?BADMAN? - March 30, 2021, 5:53 am

Recently i purchased some bitcoin and i tried to make a purchase , i am really pissed of the fees that Blockchain asking me to pay.

The seller which i got the BTC from had less than 1.5\$ transaction fee (1.3\$ actually) at Coinbase the same time that blockchain is asking me to pay 9\$ for a 10\$ transaction.

What are the fees you are currently been asked to pay for a 10\$ transaction from the wallet that you are using?

It is possible to move my funds to another wallet without paying fee?

If you own the private key, then yes.

Simply import the private key in another wallet.

Afaik blockchain.com has two versions/wallet, a custodial (no private key) and a non-custodial (you own your priv key) one.

Do you have your private key?

If not, you need to send a transaction
