Thread: [\[GUIDE\] SEND FAKE LIVE PHOTOS ON SNAPCHAT! \[NOOB FRIENDLY\]](#)

???? - March 30, 2021, 1:09 pm

Hello again HF, I saw that many ppl having a hard time sending fake live photos on snapchat because they patched it, so you can't use any apps like "fake camera" to send direct live photos or live stories now. This is only working method as far as I know at this time.

So I decided why not to share it here + FOR FREE!

What you will need for this:

[Android Studio](#)

[ChickenCam Source Code](#)

[Snapchat Kit](#)

So lets start:

1. Install android studio if you already don't have it installed.
2. Sign up on kit snapchat with link above and then name your organization anything you want, it doesn't matter.

To make new organization your username located in top left once you make profile on kit then click on "New Organization" and name it anything as I said before.

Now refresh your page and click on "Add App" in top right just below your profile picture then click "Setup" below your organization name on left side.

Next scroll down until you see "Platform Identifiers" and choose "Production" in Stage tab, "Android" in Platform tab and finally enter "com.snapchat.kit.chickencam" without quotes in Bundle or App ID and then click "Add Bundle ID".

3. Open android studio and install your SDK (android) version. It's different for everyone, you can see android version in Settings > About > then look for android version. If you know your android version start android studio click on "Configure > SDK Manager" then select your android version, click OK to download and install so you can move on to next step.

4. Extract zip from github anywhere you want, I prefer Desktop but it doesn't matter. Now go to android studio and click "Open an Existing Android Studio project" and find github folder that you extracted and click OK.

5. On your left side in android studio you will see "Project" tab. Now click on "android > creative-sample-app > AndroidManifest.xml" and scroll down until you see meta-data code block, I will provide picture below because it might be hard for someone to find it.

Spoiler [\(Click to View\)](#)

Now go back to snap kit and copy this code:

Spoiler ([Click to View](#))

then paste it between those double quotes on first picture.

6. Now we can build our app finally!

Click on "Build > Generate Signed Bundle / APK... > Choose APK then click Next > Create New key if you don't have one already (You can call it whatever you want aswell, it doesn't matter) and click OK > then thick "remember password" and click Next > Select "release" and select "V2 (Full APK Signature) and click Finish!

7. Go back to snap kit and on the same page from where you copied "OAuth2 Client ID" in step 5 you will see "Demo Users" on the bottom of the page, write your username there and click "Add User"!

8. Finally you can copy your apk that you built, send it to your phone and install it. (I don't want to explain this, it should be easy)

If you don't know where your apk is located, find folder that you extracted from github go to android > creative-sample-app > release > creative-sample-app-release.apk

9. Open the app that you installed and click on that camera icon in the middle then click "Select Image" and then click "Upload to Snapchat" and it will pop in your Snapchat app. Now you can send it direct to someone as live snap or post it on story directly.

If there is anything you don't understand or you got stuck somewhere, feel free to post in this thread and I will gladly help you with anything. I might post more pictures if you guys have a hard time installing it.

This guide is written by me, but I will give all credit to DarDur-Chickenbone who made this great apk for us, I am just kinda sharing it here. There is also a video made by him similar to this guide, you can watch his video or follow this guide it's up to you.

Ty man, glad you like it.

Earthbound999 - April 12, 2021, 7:00 pm

The V2 (Full APK Signature) never appears I just keep getting a error that the AndroidManifest.xml can't be found when I try to build the apk file

???? - April 15, 2021, 11:56 am

(Apr 12, 2021 07:00 PM)Earthbound999 Wrote: [\[CITE\]](#) The V2 (Full APK Signature) never appears I just keep getting aerror that the AndroidManifest.xml can't be found when I try to build the apk file

You should follow guide step by step and you'll be able to build it 100%. AndroidManifest.xml can't be missing, because it's already in source folder, you're not building new one at all, just modifying it.

If you didn't solve the problem, you can post some photos or explain a bit more, so I'll be able to help you.

account_ - April 15, 2021, 1:07 pm

Thanks for the share of the guide OP.

nice guide, sometimes is easier to read.

However i know people that can only learn literally whatever only in audio format and headphones.
No reading or video, strictly sound :)

Source is open source sir. ?

Furiosa - April 20, 2021, 6:49 am

it is open source, but isn't clean...

???? - April 20, 2021, 8:55 am

(Apr 20, 2021 06:49 AM)Furiosa Wrote: [\[CITE\]](#) it is open source, but isn't clean...

If you don't know what you are talking about then don't post just to post something. You can't just say it isn't clean, I'm sick of people pretending to be smart asses around here, go ahead and find that part of code that isn't clean and post it here so we can discuss about it. But I guess you can't do that because you didn't open the code or I won't be surprised that you can't even read the source code at all. So fck off kid, go spamm somewhere else... ?

Did you even look at the source?

Do you even know how to look at a source?

nabeel734 - August 12, 2021, 6:18 pm

Does this work on iphone too? could i use a free android emulator on pc and then use this apk along side? =

whoamireally - August 12, 2021, 6:33 pm

Thanks for posting this, a text guide is very helpful.

GuzGuz - August 19, 2021, 2:16 am

Is it still working? I do everything as author said, istalled apk but when i choose a pic in ChickenCam it dont appear and i cant upload it to snapchat

bepirazzi - September 7, 2021, 4:19 am

Hello,

I'm not able to finalise the APK building process.

I follow the same exact procedure as the one explained in the post, but I always get an error at the last step: <https://ibb.co/6wbSyfN>

I tried saving the final final to different locations and also using different Android SDK versions (7 and 9), but the error is still there.

(Sep 7, 2021 04:19 AM)bepirazzi Wrote: [\[CITE\]](#) Hello,

I tried saving the final final to different locations and also using different Android SDK versions (7 and 9), but the error is still there.

Didn't think about trying one obvious thing: running as admin.

Now that error doesn't show up anymore, but neither the file. Apparently, no errors occur, since it quickly goes through the building process and tells me "All files are up to date".

But still the output file isn't showing up anywhere, no matter if I change the output path. I also tried refreshing and checking for hidden files, but it's useless, output folder will just be empty.

I can help for iPhone as long as you are able to jailbreak your iPhone. Only thing is you will need to make new Snapchat account as it uses an old Snapchat version and I'm pretty certain your account will be banned for downgrading version
