Thread: [SELLING SPOTIFY AIO FRONTEND AND BACKEND SOURCE CODES \(API STREAMING\) | REACT, JAVA](#)

coolguy0 - April 6, 2021, 2:51 pm

The project is unfinished (%75 is done). Back-end uses Java and front-end uses Electron with React.

You can DM me for more details and screen shots. The price is 250 \$ but I'm open for bargain.

The back-end details;Coded with Java.

Codes are fully commented with comment lines.

Full proxy support.

No browser streaming, only with private API.

Built-in account creator without any captcha.

Streaming using private Spotify API.

Following using Spotify API.

Websocket system to communicate with the front-end.

Cross-platform supported.

(UNFINISHED) Serial check system.

(UNFINISHED) Discord web hook logging.

The front-end details;Uses React, Bootstrap and Electron.

Fully commented with comment lines.

Custom SVG logo.

Authentication system with serial. (Front-end is done but not back-end is not finished yet.)

Auto-connect to the back-end when the connection is interrupted.

One page application with sections like home, users, proxies, settings and players.

Cool neon looking theme.

Cool lo.

Font awesome is used on the front-end.

Cool looking home page.

Users page to input your users. (You can set a specific proxy to a specific user here.)

Proxies page to input your proxies. (You can disable proxies and stream your content without proxies here.)

(HALF UNFINISHED) Settings page. You can enable or disable features or change settings here.

(UNFINISHED) Players page. Page to control the players. It's not finished.
