Thread: [\\$LLT - LifeLine Token \(A token based on donations to fight against cancer in kids\)](#)

PR1V473 - April 14, 2021, 5:48 pm

Hello guys,

I would like to share with you this amazing project which is devoted to donate where it's needed. In our case, we want to help children and their families with children cancer treatment.

In short: LLT is deflationary token with 4% fee rate with every transaction - 2% of tx is burned out of the circulating supply, 2% is redistributed into holders wallet. In the beginning we have built charity wallet with 5% tokens of Initial supply which was 100M tokens. Despite of small MC we have already donated over 35k \$ for two different charities and more coming!

Why should you invest?

We, the community of \$LLT are devoted for our mission. Majority holders doesn't care 100% about profit, but also about reputation of LLT and those charities who will use the crypto money in the most useful way - and thats children cancer treatment! The more valuable LifeLine Token is, the more money we can donate. And guess what, we got dip here, which is going to be consumed soon, so hurry up if you want to be part of something better and make some bucks on it.

How is LLT different from another tokens?

As mentioned above, we are mature community. You wouldn't find here moonboys spamming about lambos, elon musk, safeblahblah and so on. Our real mission is to do something great in cryptocurrency world and I think that we are good at this field. With our tokenomics, we can achieve great results! We are serious project and that will not change.

Tokenomics again:

- 100,000,000 Initial supply
- LP burned
- TX token limit 1% of total circulating supply - anti-whale mechanism!
- 4% tax - 2% burn / 2% redistribute to holders
- Charity wallet - 5% of Initial supply (5,000,000)
- Project funding wallet - 5% of Initial supply (5,000,000) - we don't want to let the project die because of insufficient funds like many other projects do

Please if you like our mission or want just to know more about us. Feel free to ask here in comments or join our TELEGRAM. All informations are also mentioned at our WEBSITE and if you are curious about our progress in number check the CHART ?.

Contract number: 0xd37c1417da7bf5b02ffdea8d5427022dc88a0ee2

Have a nice day and see you!

#lifelinetoken

I have copied this from their Reddit page and I have invested around 6500\$ ish @ avg price of 0.11\$.

With this low MCAP, the normal burn and airdrop of tokens, I believe that it has the potential to do 10X in the next month. EXCHANGE listing is in the works, even the smallest exchange will get things rolling. My initial entry was 0.04\$ but then I went big @ 0.16\$ and my avg is somewhere in the middle.

NOT ANY FINANCIAL ADVICE - JUST A FRIENDLY TIP - NOT A SHILL

Hello to you.

Please stop copying and pasting shitcoins from r/SatoshiStreetBets. This isn't the first time you've copy pasta'd SSB and I have a feeling it won't be your last but please resist the urge. It's not helping anyone here.

We don't need a centralised "deflationary" "ceDeFi" shitcoin to donate to charity. We all know it's only designed to make the founders rich.

So please please pleaseeeeeeeeeeeeeee stop taking from a troll subreddit and dumping it here. We don't want it.

PR1V473 - April 14, 2021, 6:03 pm

My friend I am posting a quick 5X token/coin within 1 month timeframe that I think will be possible.

As much as I agree with you on the reality of random shitcoins, its up the person to lose their money.

Who knows, maybe it will 5x and maybe OP actually takes profit, cause I know half of the people in crypto don't lol.
