Giveaway: Dupinout Duplicate Files Finder [Free License]

Dupinout Duplicate Finder is a duplicate finder software for Microsoft Windows that scans your PC for duplicate files. Dupinout helps you find duplicate documents, music, videos, archives and all other file types to free-up your storage and make more space for new files.

Using the automated hashing algorithms, the search results are instant and accurate. Once your scan is finished, you'll get a duplicate files list with basic information about each file (file name, path, size, etc). You don't need to open up each file to preview the contents. Dupinout has an in-house previewing feature to show you a preview of your images, videos so that you don't need to open them separately and speeds up your reviewing.

You can review those results yourself, or use the 'Select Duplicates' button to mark/ unmark hundreds of files in One-Click using dozens of selection patterns available. You can also export your results to a separate HTML file to review them at your convenient time.

You can then securely fix all duplicates with One-Click by choosing one of the following options:

- Delete duplicate files permanently (Remember, this action cannot be undone)
- Move your duplicates to some other folder so that you can review them later and decide
- Add prefix/ suffix to your duplicates to distinguish from the original files using the "Rename duplicates" feature

Steps for Giveaway

1. Download and install Dupinout from its official website.
2. Click on the Activate link (can be found on top right corner).
3. Click on "I already have a license key".
4. Enter your Giveaway License Key.
