Thread: [MCSG: Lets troll the game community](#)

MegaCenterSecretGriefers - April 15, 2021, 4:54 am

Hello we are MegaCenterSecretGriefers or in short McSecretGriefers/MSG/MCSG..We are a group of internet trolls specializing in game cheating merely for own amusement or just to make anticheat devs rage. We also target streamers and youtubers who show ads to kids or just advertising too much...We started around 2012 posted some vids under the name McSecretGriefers and a longlist of subchannels and throwaway channels. Since 2018 we dont upload anymore on the MCSG mainchannel cus too many anticheat devs where spying on the channel...

We did some amazing things.

Bypassing VAC/EAC/Vanguard/Cheatpunch lots more. Be in mind we keep cheat software for ourselves but we do distribute Design Templates(Whats worse a Coder or a Template designer Everone knows this lol)

Oke since we now here for the first time lets share our first DT....Oke here we go.

Vanguard Anticheat Bypass.

Read only if you know what it is..

To cheat safely and unlimited on Vanguard protected games....

You need the following

1:2 Computers

2:A custom OS that resets HWID afther each reboot(Find 1 urself lol).

3:Skill in AIDLNN(ArtificialIntelligenceDeepLearningNeuralNetworks

4: A large collection of real player action data(You actually playing for the game you want make sure every map or lvl or like Runescape like games:Areas actions enz)

5: A training server with a strong anticheat to train the bot on to get rid of minor flaws

6: A roxxycapture or any HDMI/Scart cable recording hardware.

7: A humanized Mouse Keyboard Simulator(Software)

8:Lots of private vpns(They sometimes can get manually banned but almost never automaticly. This ban type is HWID and IP)...

9: A AIDLNN cheat/bot client(you need this or you get caught on pattern reconition and make it yourself lol)

10: If you want to most of the steps get a paralel Secretkernel

Setup: Connect the 2nd computer to your main computer. Redirect the visual input trough the gamecapture hardware. Plug 2 usb/serial cables in and make sure the main computer detect this as a mouse and a keyboard (can be 1 with some brands or bluetooth depends which brand/type you want to simulate) Feed your RealPlayerActionData(Make sure you got at least 1000 hours) to your AIDLNN botclient to greatly make it more human. Make sure it does miss some shots and dont be greedy with headshot only or using the same action over and over. And make so it lose a % of the matches but keep the average results high. Optional: A large QuestionAnser textbank so it can reply

in chat but this might reveal it if it replies to every player in the game...Well you good to go. Happy cheating with minimal chance of getting manually/autobanned...

MegaCenterSecretGriefers.. The immortal fear of anticheat spreading Templates like Coronavirus itself.

SIM-3343347 - April 15, 2021, 5:29 am

I will join 4chan trolls, not this

MegaCenterSecretGriefers - April 15, 2021, 5:35 am

I posted it there like dec 2020 cheaters steadily increasing afther that. It hitted the gamer news around jan 2021. Valorant responded like. Lets punish riders. Me: oke then i send anticheat triggers and cause penalties among legit players. Game devs and their E-sports investments.

Carl - April 15, 2021, 6:37 am

I dont think this is it man

Neon™ - April 15, 2021, 6:39 am

You remind me of Team Avolition back then, I used to enjoy the stuff these guys were doing lol.

I actually did. How the hell did you know wow?.. I could proof it on my linkedin account but i ain't gonna post that here it's too dangerous to do that here..Same as MCSG Template Designer. The 1 that gives coders their instructions or simply said giving them ideas.

But those at Avalon were spreading the clients so that anticheat devs could make antibodies and some went too far especially the top brass.
