Thread: [RAT to infect MacOS Victims - paying 100\\$](#)

Blockchain* - April 17, 2021, 11:21 pm

Hello,

i am looking for a working RAT to infect MacOS Users.

Already searched Github for this - but they are mostly outdated and most of the functions are not working.

Should have a Remote Desktop function + Keylogger atleast.

Help me out with finding a working one (already searched for it in this forum) and i will reward you with 100\$.

[contract=tid]Start Contract[/contract]

Push

Still looking for this.

Thanks

still looking!

how about xloader ?

Jack Spider - April 25, 2021, 12:19 pm

I can definitely provide Rat for MacOS Users.Kindly revert me to my telegram id @jackspiders

Features:-

Emulate a terminal instance

Simple extendable module system

No bot dependencies (pure python)

Undetected by anti-virus (OpenSSL AES-256 encrypted payloads)

Persistent

GUI and CLI support

Retrieve Chrome passwords

Retrieve iCloud tokens and contacts

Retrieve/monitor the clipboard

Retrieve browser history (Chrome and Safari)

Phish for iCloud passwords via iTunes

iTunes (iOS) backup enumeration

Record the microphone

Take a desktop screenshot or picture using the webcam

Attempt to get root via local privilege escalation

Note:- Many more Features or we can add as per your requirement.

One On One setup guide
