Told you guys to jump on the train before it's too late
Look at yesterday's crash and one of the only coins that held it down.
And still a couple months away from mainnet.

Phobix - April 18, 2021, 1:06 pm

? It fell and came back up a little like the rest of the coins did.

Huh

have you seen what it's been doing these last few days/weeks or no?
Compare it to the leadup towards its FLM release and you'll see a pattern
It's straight green here-on-out hopefully

Almost every coin dropped and recovered from this morning. Neo didn't do anything special. Heck doge did better in today's crash

Doge did better than the whole market based on nothing but hype.
Kinda shows you know nothing about crypto.

Also, who's talking about just this morning? I'm talking about NEO as a whole.

So NEO is almost at its ATH since the 2018 crash. Interesting.

x4 to go to get to its ATH relative to 2017.

With a month and a half till mainnet.

I see at least a x2 - x3 in the next month.
