Thread: [COVID-19 third wave worse than the first and the second waves with all the vaccines?](#)

ScorpionX - April 20, 2021, 6:15 am

According to this article, the COVID-19 third wave is worse than the first two. How can that be when we have the vaccines around? We didn't have them in the first and second waves. Here is the article:

<https://www.ctvnews.ca/health/coronavirus/third-wave-of-covid-19-infections-will-be-worse-than-the-first-two-expert-says-1.5360167>

A Nobody - April 20, 2021, 6:55 am

People have gotten cocky with the vaccine making its way around and I've hear people argue that they don't need to wear masks now. You may get it, and it won't be bad for you, but you can still transmit the virus to somebody unvaccinated that can suffer greatly. Since people don't feel an impact themselves, many of them are not being as careful. It's worth worrying about the long term damage Covid has given a lot of people.

I agree with you. And it's made the situation worse than it was before the vaccines arrived.

Forensic - April 20, 2021, 7:58 am

Depends where you are. Covid is basically over in the UK. It looks like it is hitting bad in India right now due to the new variants being faster spreading & not enough people vaccinated.

ScorpionX - April 20, 2021, 8:01 am

(Apr 20, 2021 07:58 AM)Forensic Wrote: [\[CITE\]](#) Depends where you are. Covid is basically over in the UK. It looks like it is hitting bad in India right now due to the new variants being faster spreading & not enough people vaccinated.

A ray of hope here. I hope other countries too find some relief soon.

All about getting people vaccinated. No other solution. Israel & the UK lead the way on that front. US not far behind now. Europe & India & Africa a long way behind.

TB12 - April 20, 2021, 8:03 am

My mom lives in Canada and it's gotten bad there again. The pub she cooks at has had to cut down hours for people again.

N - April 20, 2021, 9:16 am

OP you're from Canada? The third wave is hitting hard and vaccine roll outs have been an extremely slow process due to the amount of dosages that's been received.

Hopefully it gets better soon.

Alex J - April 20, 2021, 9:23 am

yeah the british version of covid is spreading very quickly and is deadlier

kookur - April 20, 2021, 9:37 am

My uncle died from Corona 4 days ago, situation is very very bad here in India. I have seen the ground reality, i can't sleep at night thinking about it. We are scared with every breath we take in.

ScorpionX - April 20, 2021, 9:44 am

I didn't know it's that bad in India. I've always thought it's the country's huge population. A country with a 1 billion plus population is likely to have more victims than one with just 2 million. Seems I was wrong.

kookur - April 20, 2021, 9:48 am

(Apr 20, 2021 09:44 AM)ScorpionX Wrote: [\[CITE\]](#) I didn't know it's that bad in India. I've always thought it's the country's huge population. A country with a 1 billion plus population is likely to have more victims than one with just 2 million. Seems I was wrong.

Shortage of beds available in hospitals, 300+ waiting lists on covid patients in hospitals, running out of oxygen, No availability of ICU or Ventilators. It's full everywhere, dead bodies are dumped like trash.

People die outside the hospital because there is no bed, sometimes there are two people on same bed or people lying on floors. There is no liquid oxygen left, if you catch covid and if it gets bad then you're surely going to die with lack of treatment.

Grim - April 20, 2021, 9:49 am

doesnt the vaccine protect from the new strains as well?

ScorpionX - April 20, 2021, 10:16 am

f o r m i d a b l e - April 20, 2021, 12:52 pm

The vaccines themselves have killed over 1000 people, probably more than that. The problem is the virus keeps mutating stronger than before, and factoring in how effective the vaccine is.

The UAE has accepted the China made vaccine rather than other vaccines; due to it being more organic with ingredients that have been used for hundreds of years. Whereas other vaccines have been newly designed and experimented with. There are places in China where people freely roam around without a mask, like any ordinary day. However, China tries not to be promotional of their vaccine.

The virus in UK has been significantly strongest in mutation which is why the nation's on lockdown. Stronger viruses become more undetectable. Because of this, vaccines may need to keep up even more.

casualty - April 20, 2021, 2:07 pm

To my understanding the vaccines will only protect you from COVID, it's not proven how well they will stop human transmission / spread.

DocShifty US Army Retired - April 20, 2021, 3:08 pm

I do not wear now, I did not even wear a mask doing minor surgery or whilst stitching people up back in the day. I have had hundreds of vaccines, I have had tropical viruses, I have been in a coma with an unidentified tropical virus. I survived obviously. Probably caught it in a swamp. Masks DO NOT let me repeat this, DO NOT prevent viral infections. They increase your chance of contracting a virus in long term use and non disposable usage. They can lower your O2 saturation weakening your immune system. They become a vector for bacteria and viruses, unless you change it every time you touch it, remove it, or just where it for a length of time.

COVID is just another virus with a body plan the same as any cold virus. It will never go away the same as the common cold. We will adapt. The common cold was at one time a novel virus and probably was the reason for our near extinction in pre-history. Also it is possible that some people do not get sick now is because immune cells for common cold may recognize SARS-CoV-2.

If you are sick already stay home get rest, lots of fluids, carbs, and a little protein. If you HAVE to go out then you can wear a mask for the short time you have to be out. Example if your fever reaches 101.3 take acetaminophen and/or ibuprofen and don't exceed the adult dosage for either in 24 hours. If your temperature reaches 102 go to the Emergency Room and put on your mask.

(Apr 20, 2021 09:23 AM)Alex J Wrote: [\[CITE\]](#) yeah the british version of covid is spreading very quickly and is deadlier

I guess the British have already neutralized its effects on the country since there aren't as many new cases as there were in the first and second waves.

Yanix - April 20, 2021, 11:39 pm

I really don't know if we are on the 2nd or 3rd wave already.

Cases isn't ceasing but constantly increasing.

Lockdowns as always...kids cannot roam around the city. malls are just open for some essential needs and food chains are open for take out and delivery only.

ScorpionX - April 20, 2021, 11:42 pm

Shouldn't the pandemic have eased now with the vaccines? I just don't get it.

(Apr 20, 2021 11:42 PM)ScorpionX Wrote: [\[CITE\]](#) Shouldn't the pandemic have eased now with the vaccines? I just don't get it.

Vaccines can create herd of people in the community that have much more protection against the virus, but until now here in our country the vaccines are pretty limited. Mostly the medical frontliners are the first one who should take it and be followed by the senior citizens and people with co-morbidities for the vaccines are just limited until now. Maybe vaccines will bring great help when most of the people have been vaccinated but don't know when it will be done.

True. We really hope the vaccines can be rolled out faster so everybody can be vaccinated.

It is for the those countries who are powerful and have enough money to buy vaccines but for those who doesn't have enough sources it will be wait and see.

BaldCunt - April 21, 2021, 12:04 am

Because there is way less restriction than the 1st and 2nd waves.

I hope those vaccines really work.

First time in my life that I have enough time and decent money to go back to my homeland and this fcking virus just squashed my plans.

When 75% of a population has immunity(either through vaccines or previously having had the virus) then it should fizzle out to non-existent numbers. So Israel & the UK for example are basically there already. Some places have less than 5% immunity and will have problems for awhile. By July I think

it'll be almost over everywhere.

ScorpionX - April 21, 2021, 4:36 am

Thanks for the ray of hope.

Beherit - April 21, 2021, 4:59 am

I'll try to maintain a stricter healthy lifestyle from now on.

I've been taking a daily amount of around 4000-5000 IU of vitamin D, 500mg of vitamin C, and a multivitamin with 15mg of zinc.

COVID-19 Supplements study:

Perhaps governments should start considering the Chinese vaccine.

LeetSpeed - April 25, 2021, 1:23 pm

yeah it's gotten worse here on the 3rd wave, people got way too arrogant with the vaccines rolling out.

Bluffer - April 25, 2021, 1:28 pm

Don't think countries like Israel, UK, and the United States which have done a good job producing vaccines are having a bad third wave. It's countries like ours (as the link in OP shows - Canada) which hasn't had a lot of people vaccinated yet, and poor countries like India that are really struggling with the third wave.

It's pointless to debate Covid or vaccines or anything like that on HF though, if you know the demographic.
