EDIT: USE APEX35 for 35% discount! Only has 5 uses

Xzedin - May 5, 2021, 10:40 am

My Review:

The aimbot was amazing, locked on smoothly with no lag. I like the features that the dev has put to edit these features. It is very smart and in reviewing the footage there's no interference. All seems natural.

The Glow/ESP was natural and you could see the enemies dependant on your Glow distance. I never had a problem with the glow it always felt like it was apart of the game.

It is a basic command line cheat at face value, easy to use, but for the price it's way more than that. The seller is super friendly and will even play with you.

I highly recommend this cheat due to its pricing and its community. The OP is gonna keep updating

this and has been already.

I have purchased his cheat and have had issues getting it run.

I eventually got it running for a couple hours. After a PC restart I'm back to having the same issue.

The seller is really hard to get a hold of an doesn't respond often making this process much more frustrating.

I'm trying my hardest to give him a vouch and was willing to make a video of the cheat. That is if I could even get the thing to run.

Can confirm guy will ignore you outright if he doesn't feel like talking to you. Cheat works but you'll never have any insight into what's going on. Guy hasn't responded to me since initial setup. Continues responding to fresh customers while ignoring you in DM.. Doesn't follow through on promises.

Because you don't respond and when you do it's a fucking useless runaround.

I highly suggest don't purchasing this cheat. If there are any issues the OP will not respond and leave you in the dark.

My review from the one day I got to use with it. The aimbot is fucking shit. It's basically an ESP hack.

Can't even offer support to get the damn cheese running.

Even the moderator from his discord said that razor never responded to him. He said it's either terrible code for being an external cheat or a silent miner.

and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

You know I'll say one thing; half of apex's burden is placement. Most times you don't need aimbot as they are very noticeable. But the slight glow from the characters especially if you have like a bloodhound or crypto doesn't look weird at all. Would you be interested In making a guy like me try it but never turn on ever the aimbot. I used to play MoH:AA and the wall hacks were good enough for me at the time. My moto was; if even knowing where they are I'm not good enough to shoot them; then I simply suck too much for the game. I've always believed the aimbot part of hacks were too obvious and detectable. The walls tho; If you never activate the aimbot; nah. Yea it gives you a certain edge; but the rest comes to your skill. If you can't kill; then you're not worthy haha. Never been interested in aimbot but the through walls glow; won't lie I'd try it
