A RAT is a remote administration tool. They can be used for many various functions to control and administrate a computer remotely.

It is not a low specification RDP. You are paying for the setup + support. Also, it is not "1 month BitRAT" it is also paying for the 6 month license of BitRAT, which is \$89 alone.

Interesting, sending you a message right now!

Purchased from UnderBot via Discord... the entire process was really smooth. After setting up a contract, I paid first via btc and then he started setting up my order in no time. Not long after, he delivered with explicit instructions to easily gain access to the RDP and test everything out. It works great!!

HQ Seller, I recommend this guy! :)

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

Best to read contract reviews and decide for yourself. Remember you can always use middlemen services for assurances :) Check this thread if you have not yet:

suspecting the service since he said tampering with the rdp will get you suspended. that means he will be monitoring people's work himself and if you try to change password he will suspend you or am i getting this wrong?
