I'm thinking about making a pic of a friend with him surrounded by grove street gang members for his instagram and I was wondering if there was a way to get the models so I can manipulate their arms & legs to make them sit or something. It doesn't have to go in full detail like facial expressions & shit but was wondering how this would be done. Anyone?

Talking about these kind of models

I can't help you, but I love the personalised gift.

Just make sure he isn't CJ... he is snitched by that mf "homie" of his in the end.

if you know how to Rig 3D models. i found the models online. you would just need to rig them and then you can place and manipulate them in any way you want
