hello you find solution? i am looking too but those sites like www.sendinblue.com is not good idea coz they asking a lot of questions about how you find the email list and bla bla even if you tell them by newsletter or what ever they are not satisfied and they close and suspend the account.

If you have 500k email list then I would recommend you to use [censored] or Linode PMTA servers with port open to send mails ? (gmail and hotmail inbox guaranteed)

Let me know if you are interested
