Is this a trusted service? Anyone used before?

Idk but you have like 15-20k bytes worth of eggs Imfao

Thought you were appraising the domain Purse.io cuz that would go for tens of thousands, that being said, I don't think they would run a scam on that domain, although that's not something to go by just my thoughts.

I see it has https, https usually means it's safe, http means it is unknown.

never trust https! It's easier than you think to generate an ssl protocol
