Thread: [My Crypto Portfolio For 2021](#)

Blockonome - May 12, 2021, 12:47 pm

Hey guys,

Thought it would be nice to make a thread with my portfolio, so I could share with you guys, what I am currently investing in.

1. Bitcoin (BTC)

- Always had some BTC since 2020 and back in 2013 (did buy some stuff for it back in 2013), mostly accepting payments in BTC, have not actually "invested" in BTC from 2020 and onwards, just collecting payments in it, as that is what people like to pay in. (fugg them fees though).

2. Elrond (eGLD)

Avg. Buy-in Price: \$141.29 - Way better transfer between wallets, instant and easy to do. Really low fees for sending, same or less than LTC. Truly believe that this will be used more and more, as it is a better alternative to ETH.

3. The Graph (GRT)

Avg. Buy-in Price: \$1.55 - They call it "the new Google of decentralization" and provides indexing and graphs for a variety of purposes within the decentralized world already. A lot of beautiful use cases and strong community.

4. Enjin (ENJ)

Avg. Buy-in Price: \$2.12 - A coin that is used within games to purchase different in-game items that can be transferred between games. Knew I wanted to invest in one Gaming Crypto Coin, and this was the one, so far it is doing fine.

5. Polkadot (DOT)

Avg. Buy-in Price: \$38.6 - Probably my most unlucky start, as price dropped right after I bought it, but this is a long term hodl, and I trust the team and what the project is about, but what got me curious is the fact they work with Web3 foundation.

6. Ankr (ANKR)

Avg. Buy-in Price: \$0.09 - A solid and smaller project that I got my eyes on, got a few use cases and provides some solid value. I got in early and hopefully this is the coin that will go to the moon, I hope for it at least.

Please let me know what you think and tell me what kind of coins you are invested in! My plan is to HODL and see what the outcome is and at the same time stake them, to earn some interest.

SIM-82498 - May 12, 2021, 12:50 pm

I think that's a solid portfolio for long term. I'm also holding eGLD and GRT.

noicee

I wanted to put this in, but I cannot see the charts? What is up with that?

BakingApe - May 12, 2021, 12:53 pm

No ETH? Can I ask why you choose not to invest in it.

Blockonome - May 12, 2021, 12:55 pm

(May 12, 2021 12:53 PM)BakingApe Wrote: [\[CITE\]](#) No ETH? Can I ask why you choose not to invest in it.

eGLD is basically a competitor to ETH and not that I do not like ETH, I do. However, ETH has not really been on my table of interest, I hope that eGLD will take ETHs place some day, lol.

Orchid - May 12, 2021, 3:52 pm

Nice, sad not to see any cold hard ethereum

Koyote - May 12, 2021, 4:00 pm

Some good picks there, but personally I would add ethereum and radix!

shreder - May 12, 2021, 4:38 pm

Don't like Ethereum? But 3 of your coins are on Ethereum. ?

Blockonome - May 12, 2021, 4:40 pm

(May 12, 2021 04:38 PM)shreder Wrote: [\[CITE\]](#) Don't like Ethereum? But 3 of your coins are on Ethereum. ?

It is not that I do not like it, I do believe in Ethereum, but I am betting on the 3 coins that are on ETH instead of ETH itself :)

Ok fair point, but some ETH wouldn't hurt ?

Yin Yang - May 12, 2021, 7:41 pm

Enj is such a sleeper in the NFT space

Blockonome - May 13, 2021, 6:31 am

It had a bit of traction last month, but hopefully it will increase over a longer duration of time

A little update on my journey, we are in a plus, due to EGLD being a nice grower! Let us see how it looks in a few months!

Almonds - October 18, 2021, 4:26 pm

I've been looking at elrond for some time, and I am big on polkadot.

My coin for 2021-2022 is Proton (XPR).

littlemay - October 18, 2021, 4:45 pm

In my opinion, ETH and LUNA are a must for long term.

(May 12, 2021 12:52 PM)????? Wrote: [\[CITE\]](#) I wanted to put this in, but I cannot see the charts? What is up with that?

How could I put these tables like this ? I am wondering as well.

Maskin - October 18, 2021, 7:52 pm

I know BTC, ENJ and DOT are good picks. I don't know enough about the other ones you mention.

My portfolio is heavily on BTC. But I also got ETH, ADA and KALM.

I don't know the first thing about investing in smaller coins. Can I just copy you guys?

What platforms do you use to hold these coins and how do you handle exchange fees (cashing out)?

Redwall - October 19, 2021, 1:02 pm

Don't put anything down on small coins you're not willing to lose.

Hey man, don't stress it!

The buying process involves looking up the coin on sites like [CoinGecko](#) to see which exchanges (markets) that it is being traded on. For example, Proton (XPR) is trading on KuCoin. The trading pair is USDT, so you'll have to create an account there. Then you will have to send over USDT, or a coin to sell for USDT. Then you can purchase Proton (XPR).

Proton specifically has a mobile wallet where you can create an account and send over your coins to the wallet to store/stake accordingly. Cashing out can be a different story, depending on where you live and their capital gains tax.

Definitely copy us, we are advocating for these coins, but be diligent with your investments and do your own research! ?
