Thread: [Blown away by the Radix love in here!](#)

fuserleer - May 14, 2021, 9:24 am

Discovered you guys a couple days back thanks to a tip on Twitter! Super happy I got that tip off!

Just wanna make sure you guys are in the know with all the channels where I and other members of team spend most of our day to day.

In no particular order, these are the best places to get info from the source and interact with us quite closely:

Twitter

<https://twitter.com/radixdlt>

<https://twitter.com/fuserleer>

<https://twitter.com/piersridyard>

Telegram

General project chat - https://t.me/radix_dlt (I hang out here a lot)

Traders channel - https://t.me/Radix_TRADER

Developer channel - <https://t.me/RadixDevelopers>

Announcements - <https://t.me/RadixAnnouncements>

Youtube - https://www.youtube.com/channel/UCWz_uLkOCrmSUnLAXSY4N5Q

My Twitch - <https://twitch.tv/fuserleer>

Reddit - <https://www.reddit.com/r/Radix/>

Think that's all of them!

Thanks for the support guys!

SocialMediaBoost - May 14, 2021, 9:33 am

We're super stoked about Radix. Can't wait for the group buy to go through.

Voxi - May 14, 2021, 9:38 am

Glad you found us! I have my entire family invested in Radix & we're all rooting for you ?

Edit: my mother told her friends and other family members she's invested in Radix now and I have even neighbours asking me to buy some for them lol

Aishun - May 14, 2021, 9:38 am

Yeah, grabbing myself a big bag of Radix in group buy as well and HODL for years :) Awesome community and project itself.

cokecaine - May 14, 2021, 9:45 am

Such a great and transparent community! Will definitely invest in Radix soon.

Yin Yang - May 14, 2021, 9:56 am

Thanks for all your & dev team's work!

Really looking forward to the main net launch and all what Radix will offer.

Orchid - May 14, 2021, 10:44 am

Well, this is pretty neat.

double chocolate muffin - May 14, 2021, 10:57 am

Keep up the great work! You are genius fellow!

Hern - May 14, 2021, 11:30 am

Woah the fact that they made an account and came to post about it is kinda amazing.

We are all rooting for Radix here!

Trying to set aside a decent amount per month for the rest of the year. Just wish it was easier to get a hold of in USA!

SUI-3183372 - May 14, 2021, 11:34 am

Happy to have you in our community. I'm sure you'll find a large number of people here available to aid you with whatever you may need. Really excited about your project.

BalleJatta - May 14, 2021, 1:40 pm

You checking up on us just gives us more reason to invest :) when radix goes big we could at least say we were in touch with the founder via hack forums in early days of radix :)

Ninja. - May 14, 2021, 5:54 pm

Good luck team! hope to see a bright future with you guys!

Tesseract.mk - May 14, 2021, 6:59 pm

This thread makes me nervous.

Tightarse - May 14, 2021, 7:34 pm

I was here...

Trying to get free radix from the community challenges

Tesseract.mk - May 14, 2021, 8:20 pm

(May 14, 2021 07:03 PM)Beau Wrote: [\[CITE\]](#) lol why?

On a side note, I'm not invested into Radix (yet?). This tweet resonates with me. Thanks for this! ?

Comes across as a complete fuckwit with that tweet. Was it directed at anyone specifically, or does he think he's smarter and more motivated than everyone as a whole?

His ego makes me nervous.

.Infinity. - May 14, 2021, 8:28 pm

(May 14, 2021 08:20 PM)Tesseract.mk Wrote: [\[CITE\]](#) Comes across as a complete fuckwit with that tweet. Was it directed at anyone specifically, or does he think he's smarter and more motivated than everyone as a whole?

His ego makes me nervous.

Honestly agreed. I hope he deletes it because that's by far the most off-putting thing I've seen from Radix so far.

shreder - May 14, 2021, 8:36 pm

I avoided writing avoid Radix as it seemed like a decent off coin... well until you dig. But just as Satoshi warned centralized figures always come back to bite you.

Looks like Dan over here has some history... I know users have quite literally their life savings in radix. So not to cause panic but if you see it you see it.

<https://bitcointalk.org/index.php?topic=411366.0>

Emunie actually died off as the thread speculated back in 2014, so you can add that to the list lmao.

Literally, this is the first thing I found on the front page when I googled him lmao.

<https://bitcointalk.org/index.php?topic=411366.0> Lol. THIS IS REALLY QUESTIONABLE. WHY WOULD HE FAKE THE LINKEDIN LOL

.Infinity. - May 14, 2021, 9:02 pm

(May 14, 2021 08:57 PM)popZmoke Wrote: [\[CITE\]](#) Lol. THIS IS REALLY QUESTIONABLE. WHY WOULD HE FAKE THE LINKEDIN LOL

To be entirely fair... LinkedIn is pretty bogus to begin with. He could have easily been the only person working at a tiny IT company and given the role of Senior Developer at 16. I've had plenty of friends do similar things. Titles at small companies are completely arbitrary.

Not saying it isn't sketchy overall, just saying the LinkedIn bit about job titles is pretty irrelevant.

shreder - May 14, 2021, 9:41 pm

(May 14, 2021 08:57 PM)popZmoke Wrote: [\[CITE\]](#) Lol. THIS IS REALLY QUESTIONABLE. WHY WOULD HE FAKE THE LINKEDIN LOL

Actually, LinkedIn looks legit. The Emunie project is what makes him look sketch than anything.

SIM-1866423 - May 14, 2021, 11:37 pm

Finally i am glad to see some FUD against radix once again just proves tech is unquestionably way better than any other coins. It is just shame some kinda low level FUD tho i was expecting some solid arguments against directly radix tech. If you are "worry" about product will be never delivered or radix team will run off or something, betanet wallet is working as expected, cassandra already has proofs working %100 and of course team working last 8 years or more hehe.

I am not surprised it directly comes from huge eth fan @shreder, he seems get used to empty dreams and unusable networks already. If you want some real FUD just show up on official telegram page and ask your questions, team already open for everyone. But probably your aim is glorify eth like usual so .. even reply to you is pointless. Please just learn to not getting emotional with your investments.

Regarding "ego" thing i am completely agree if you are smart you should not tolerate something against your work. You directly need to crash opponents which is EXACTLY WHAT RADIX WILL DO. Its just makes me sad nobody even checked what tweet regarding about ...

Like i said if you want to FUD against project directly jump into official telegram page and ask your question to crash project, if you can. Otherwise please do not bring your low level FUD against well invested, researched project it's just makes me sad of course not even mention its just disrespect against such as project. If you got balls CREATE PANIC i am not married with my investments crash radix if you can :) Let me drop this ;

Emunie actually died off as the thread speculated back in 2014, so you can add that to the list lmao.

Literally, this is the first thing I found on the front page when I googled him lmao.

Emunie didn't die off, it evolved and was rebranded to Radix. I just stopped posting on bitcointalk.

People post untruths for whatever reason, like the LeoC guy. Some of them stick around and become a pain in the ass, some don't. Any truth can be twisted and made to seem like fact, especially if there are sprinklings of the truth in there.

I've defended and debunked that thread probably 100 times now over the years, stopped doing it as it just comes back a couple months later. If it puts you off, that's totally fine, it won't stop me getting to my end goal.

Ask yourself though, what scammer spends 8 yrs "scamming", producing functional code, papers, partners with top universities, hires a respectable team, can answer all the difficult technical questions, then has to buy tokens from the market like everyone else with his salary?

Can I get an award for worst scammer ever? ?

As an investor, it is only natural to inspect and scrutinize everything. I simply just brought it up, I verified that the LinkedIn claims from Bitcointalk were not valid in a previous post. I didn't have time to look further as I am not actually an investor. This is simply information for HF to do their due diligence.

I hope you do pull through with your promises, HF member's money are on the line. Good luck though no ill wishes.

No ill wishes at all. You should ofc perform DD of the things you're investing in.

I thought a statement regarding why I don't actively debunk that stuff anymore would provide some additional clarity, as I get asked "why don't you do something about it?" frequently.

Oh I've tried, believe me haha

Dannisthethird - May 15, 2021, 2:10 am

Okay, take this nooby question :P

I have 25\$ that I want to buy radix with, I have little knowledge about this coin, but I was reading stuff about group buying which made me assume there may be high fees.

so where can I buy some with 20 or 30 bucks? :D

mres - May 15, 2021, 4:29 am

Well go and buy your outdated ETH, we have been waiting for eth to fix their gas fees for years now. And they are gonna be left in the mud in less than 5-10 year by real projects with proper developers that actually care about the future and not just money now.

buy your ethereum while we buy radix lets see where we are in 10 years.

This post is meant for you shredder.

Hitachi - May 15, 2021, 4:33 am

These are not sort of the questions you ask or expect a founder to answer, radix is available on coinmarketcap website and you can see exchanges it is available on.

BalleJatta - July 1, 2021, 1:27 am

Hey dan found this article of you explaining what went wrong with emunie and how it was fixed when you discard the blockchain tree and adopted ledger channeling. I am very curious to know when you got everything figured out in the end around 2016 I believe what made you again discard everything you had contributed and switch to Radix? I understand the hacks and stuff pushed the project back by ages but here it seems everything was almost ready to go, I am very curious to know what was the reason for discarding emunie when everything here seems like it was ready to launch and transiting into Radix?

Simply because it wasn't good enough ?

The "channels" mentioned in that implementation, which became formally known as CAST, were essentially the first manifestation of a sharded ledger *ANYWHERE*. The crux of that interview is me answering questions no one was asking, which seems to be a bit of a trend (atomic composability anyone??)

Initially the throughput target I set back in 2012 was to meet VISA scale, which CAST could do with some persuasion. IIRC we managed spikes of ~5k in community testing, all the way back in 2015/6.

Within the community though we were having conversations about much more than just simple state flipping transactions and even "smart-contracts". It was obvious where things we going to go and basic transactions and smart-contract were just the tip of the iceberg. Back then I was having ideas and discussions about NFTs, social networks, P2P data streaming/storage, marketplaces, DAPP stores (the precursor of what's now developer incentives), DEXs, etc

The evolution of use cases meant that the initial VISA throughput target I had initially set was just not going to be enough, and the complexity required to morph CAST into a general purpose state ledger was just too high. So again, swallow the tough pill of no compromise and click "File -> New"

I learned a lot from developing CAST though, and sprinkles of it is still present in some form helping to define the theory behind Tempo, it's discarded successor, and now Cerberus/Cassandra.

In a nut shell, your knowledge kept on growing and you realized it wasn't simply enough, right? Just one question Dan, do you think what Cerberus/Cassandra will achieve is more than enough for future because at one point of time scaling to visa level felt enough but when you reached there, you

realized there's much more to it than just scaling. This question comes out of curiosity and also slight fear that this project might be pushed further by years! I really appreciate you taking time to explaining this, no C level management of any tech/coin/company would do this Dan. Thank you very much

Right ... as a one-liner "good enough for the present, but not the future".

I just wasn't willing to box myself in to a technology I knew was going to be inferior or inadequate down the road. Furthermore I was lucky enough that I didn't have to, having the financial security to be able to iterate numerous times and not worry about paying the bills.

As for Cerberus and the stuff I'm doing with Cassandra, there's nothing I can think of that it can't handle from a use case POV. For example, back in May I spent a week or so doing some crazy things with it such as deploying Flappy Bird, serving ledger hosted websites, on ledger chatbots etc which were all performing atomic cross-shard operations. I didn't even design any of these demos, just shot from the hip and put them together. That level of flexibility tells me the fundamental tech stack is there.

The other critical items such as scale and security have been tested extensively now too, in both closed and public environments (see the Twitch streams). While there is still a lot of peripheral implementation work to do in a number of areas (bug fixing, optimizations etc), all the core foundation components are implemented and are following the expected theoretical behaviour and producing empirical output we have seen before (where applicable). For example, Cerberus is almost a copy/paste of Tempo's sharding model which was already tested to 1.4M TPS a couple of years back.

Remember, I started the Cerberus/Cassandra implementation only 6 months ago at the end of 2020 as a means to get irrefutable confidence in this final iteration. Today it's arguably more capable than almost anything else out there right now, either deployed or in development. In ~6 months the main dev team will be picking things up from Cerberus/Cassandra for the next releases ... imagine where I'll be with it in another 6 months time!

I have watched plenty of twitch streams, flappy bird, twitter etc! Thank you for taking time to explain it to me Dan, I remember reading you sold your house once to move into a smaller one to save up more and fund the project. Such level of sheer dedication! I hope to see you much further ahead in next 6 months :) not for the sake that I and many here are invested in it but Radix is the project that actually has a possibility to take the next big leap in terms of technology in Crypto. Good luck, Thanks again.

(Jul 1, 2021 02:34 AM)fuserleer Wrote: [\[CITE\]](#) The evolution of use cases meant that the initial VISA throughput target I had initially set was just not going to be enough, and the complexity required to morph CAST into a general purpose state ledger was just too high. So again, swallow the tough pill of no compromise and click "File -> New"

I agree that you have to go well beyond Visa limits. You have to meet Visa, Swift, NASDAQ, NYSE, and a few others all at once.

Also it sounds like Dan could have released something along the lines of Ethereum but realized that eventually he would hit the same bottlenecks that Ethereum Network faces now. And even the ETH 2.0 won't fix it long-term. Seems to me that Dan took his time to release the ultimate blockchain technology that solves all existing problems with limits and scalability.

When the USA won WWII against Japan it wasn't because we built faster airplanes that went 350mph over the existing 275mph. It's because we built the Atomic Weapon. You want to win the crypto wars...you gotta go BIG. Sorry about the odd analogy but it was the first thing came to mind.

I really think Radix is gonna be crowned King for Smart Contract technology one day. That's if Dan can finish his work. Sorry for the pressure Dan but some of us have our financial futures riding on this.

I put \$26k in this project and I'm in my early 20s? I'm hoping Radix can make me a millionaire before im 30 and set me up for life.

you guys are investing a lot of money in this god damn

I love the optimism but to reduce risk I find it preferable to DCA instead

Life - July 2, 2021, 2:44 am

I just follow you and Piers! :D Only 3 accounts I have notifications on for lol !!

Radix is revolutionary and I am in love with the project. Investing as much as I can when I can!

BalleJatta - July 28, 2021, 12:02 pm

Congratulations Dan for the main-net! Hoping to see more progress in future
