Thread: [i'll bind your exe with .doc or .xls](#)

Batman96 - May 16, 2021, 4:18 am

there are two options

There are 2 methods for doc exploit.

Method 1 - macro: you need to press "enable editing" + "enable content" for the exe file to work.

Method 2 - silent: you need to click "enable editing", the exe file opens immediately after.

Hidden (silent) doc works on 2007-2016 unpatched offices and does not work on Winserver.

The hidden doc must be sent in the archive. (Without an archive it possible only to corp mails)

Silent has 3-4 detections after refuding <https://antiscan.me/scan/new/result?id=TS7cICiD7Ufp>

Refuding silent once a week from WD.

xls Macro only. Crypt is included in the price

Macro detect: 3-5 <https://antiscan.me/scan/new/result?id=u3rMWL4IRiZU>

Price Macro 60\$

Price Silent 200\$

[contract=tid]Start Contract[/contract]
