Thread: [4 figure numbers into 5 figure letters](#)

Gologuzan - May 18, 2021, 12:22 pm

Hello,

i have a question and i need help. when i enter 4 numbers on one side, as a result i get 5 letters that are always just first 10 letters of alphabet.

now my question is if i can make generator or something that will give me 4 digits as a result of me entering 5 letters?

i know i can enter all 10k combinations of numbers and write down all 10k results in excel sheet, and i can search 5 letters result to find out 4 numbers that are generating that, but if it is possible i would like to avoid that.

is that possible at all, and if it is, where should i start?

thank you all for your time.

if someone wants to help i can provide current 20 combinations, and additional ones if needed, just to avoid typing all 10k combinations.

Can you provide some examples?

prntscr.com / 1335zhd

prntscr.com / 1335zq9

i hope that this will help.

i am sorry i can't post links or videos or images atm.

Seems to be like something using base20 and compounding any value below 9, bringing you back to the A-J range.

1111 base 10 is 2fb in base 20. I can't find a direct calculation here though. But that might help put you on the correct line of thought, or be completely wrong :P
