Thread: [Just bought \\$1500 More ETH & \\$1500 More BTC](#)

I'm outside smoking a cigarette right now —

Let's see where this takes me. I'm in pretty heavily right now beyond this 3K, and plan to hold regardless if bitcoin hits \$200 or where ever it decides to go, but whew!

Where do we see things going from here?

It is defiantly a good time to buy ETH. EIP 1559 and ETH2 are both coming soon! BTC might go either way.. There was a lot of eyes on Tesla accepting BTC and now that they stopped, other institutions will probably follow him as usual. Smh

I am unsure on rather to believe he has such an impact on Bitcoin. I plan to hold both for a long time, and if it continues to drop I will just keep dumping more money into it... That's kind of where I am at with things right now..

I personally think he does. If he can come up with a valid argument, which he did.. then that's all it takes. BTC dominance has been falling very fast. Some say that's normal and part of the cycle but I think its just going to get worse.

Just my opinion.

If this were to be the case then we may see coins that have been around for quite some time sky rocket? That's what it sounds like you're saying to me? Correct me if i'm wrong!

Just bought 1k ETH aswell. Going to start staking into buying more BTC too while things are on the low.

I personally loaded up on alts and eth, Bought the dip in a big way. Always buy the fear and sell the greed. It's really all about dollar cost averaging into the position and never to invest all your money into one basket :)

Always have that side bag with holds since 2012 though.

Best of luck in this crazy world.

You will be good man. We're in this for a run, it will be a long hard one but worthwhile in the end.
