Thread: [Will this be service be useful \(HQ \[BRAND NAME REMOVED\]/Snap Adds\)](#)

SnapworkS - May 19, 2021, 3:06 pm

Was browsing this site for a while, see a lot of info and request for info on getting good traffic etc. So was wondering If this would be a service offered if people would be interested, if I did it I would offer 2 vouch copies to some users who have a good reputation and can give a good review.

So essentially what I'd be able to offer is a snapchat account loaded with an amount of adds for a specific State/City, lets say you picked LA, most the adds would be within the 100miles radius of LA. Makes it easier to have all adds in the same state for obvious reasons. Also you'd get the snap account already with the adds added, ready to go for whatever the use is.

I'd need to know your city/state so when I'm adding the users and then when I transfer the snap account your way there isn't an instant block on the account.

The traffic of the users you are getting are from [BRAND NAME REMOVED], which again makes a big difference because at least there on [BRAND NAME REMOVED] its not random people. Of course some will ask how did you add me, but 95% wont care when you post a nice story they will be more then happy.

The amount of adds would be minimum 500, and maximum 2500.

500 = \$125
1000 = \$225

1500 = \$325
2000 = \$400

Also there would not be any duplicate usernames, so if Bob wants to pick LA and 500 adds, and then Timmy wants to pick LA and 500 adds, Bob and Timmy wont have any of the same usernames so there will never be a clash.

Also all users would be added on a list on the snap account, so you can send a snap to large amounts of them at once, instead of clicking one by one (I'd explain more to the people who purchase and then two free vouch would be able to review this extra aswell).

Do you guys think this could be a service people would be interested?

Main perks being all the users are in same city/state chosen by yourself, can be worldwide, all from HQ traffic ([BRAND NAME REMOVED]), non repeatable users for anyone.
