Thread: [loadman \(uid: 3128111\) scammed me \\$100 for a detected macro doc exploit](#)

Snax - May 23, 2021, 9:48 pm

hello,

before everyone starts blaming me for not using a contract with this guy:

hackforums.net/member.php?action=profile&uid=3128111

I wanna mention that I paid him for 2 services before and he did deliver them, so I assumed I can trust him for more deals. anyhow, I recently asked him for 1 build of macro doc exploit and he said it'll cost me \$100 and that it can bypass wd in runtime. I'll let the screenshots of our conversation tell you what happened after I paid him:

imgur.com/a/c2qDQCo

so not only he sent me a completely useless macro exploit but also ignored me for over 3 weeks! it's just sad to get scammed by sellers who you've earned their trust before.

p.s. this guy has never mentioned his telegram id on here (afaik), but I got it by contacting him on jabber and he asked me to give him my id so he can message me instead. so, in case he denies that I wasn't talking to him then the people who already messaged him on telegram can verify that for me, please. [warn]
