1 of my good friends told me stellar lumens xlm is going to be the next big thing?

Tightarse - May 28, 2021, 6:35 am

Just sold all my xlm so probably the case...

It's good for transfers between exchanges. Costs .01 xlm

Stellar has been around for a while now - what would cause it to spike up and become more popular all of the sudden?

90% of the people in the crypto community think their alt coin they bought 100 of is gonna be the next thing. You should have seen the ADA, ALGO, and NANO subreddits the day Elon announced Tesla was dropping BTC as an accepted form of payment. Every thread and comment was people in their own respective bubbles jacking each other off about how they knew their coin was gonna be the next pick and it'll skyrocket in a few days.

Do your research, find what coins are trying to do the same or similar things. It's impossible to know which will be the next big thing, but if you want to make an educated guess you have to do your research.

That is some solid fundamental analysis. I should start getting financial advise from Google.

lirc, \$10 was very optimisic after like 5-10 years.

\$100? Wtf? Maybe if it were the next bitcoin, everyone knew about it, everyone used it, and it made using lots of other cryptos a waste of time/money.

in this world you don't know what happen tomorrow ,i just bought bought some stellar lumens on coinbase 0.42€ each i be ok if they go to 1€

XBT4R - May 29, 2021, 9:29 am

It's definitely going to be the next big thing.
I don't see why it can't be in top 5 list.

mark187 - May 29, 2021, 11:34 am

stellar lumen is 3 most hold currency on coinbase

It's a solid project with a decent amount of partnerships. It does tend to go up as xrp moves. But I don't expect it to be a top 10 project.
