Thread: [Silent Doc or PDF exploit](#)

MrQr - May 29, 2021, 12:45 am

Looking for a doc or pdf exploit that works and can get connection in # or any rat.

Willing to pay \$1000 for this.

Must work and must be from trusted vendor and not a scammer.

Please lets save the trouble by not scamming as I know how to spot scammers.

If anyone can help, Please let me know

When you open a macro exploit second time in windows PC, it just look like OLE/silent exploit so you can get ripped that way tho :D saying again, just don't get scammed.

Like pandalord69 said, go for macro exploit, else experience the scam and then go for macro exploit, hope this helped, have a nice day.

Thank you. Always good to have someone have peoples backs. Ya I am definetly going to do macro exploit. But for pdf exploit, i will only want to do the demo in my vps or vmware. also there are great people like you and nero. Maybe i will run into an honest person. My team wont be hacked because we have 8 people on our team and our network is very secure. but still we will always be on the lookout just to never get scammed.

Also how is trillium exploi? Seems legit and expensive but worth it. I will read about this first but you guys think i should use him and start a contract?

you give me a good deal. I was going to pay \$150 for the one month. I still am going to.

But for now, if you can exploit one file for me, I will pay \$50 but it has to be a pdf and i have to see a connection in your rat. I will double click on the pdf and if you get a connection, then I pay. Is this fair?

Also I have to ask Trillium if i can do this. It is his software and i dont want to upset him.

well I suggest you to check with static ip from remote machine because there was a scammer who scammed me for the doc exploit he was running the bin file in his crypter and building the connection over relay for that you have to install that exploit in every machine yo exploit just test it on two different networks no localhost.

Yes correct its easy to provide connection through fake injection of shellcode every scammer do this he will show you injecting bin file in doc but actually he runs the bin file under his binder or packer and generate the same doc file which is not malicious. so he can easily scan that file on virustotal and other dyncheck.

1k\$ for a silent doc exploit? there is nothing like that if someone offers for such price its 1000000% scam. i know someone trusted who uses escrow/middleman but his price is 5k\$/ 1 build for silent doc. your best option as of now is to buy macro 150\$/per file bypassing every AV.

You can take advantage of the developer mode for micro units to create and run Payload in windows, you only need strong encryption

DragThis - July 23, 2021, 2:22 am

Be very careful its very hard to find a FUD version do not trust any video watch the PoC over screensharing otherwise dont purchase. With the price you mentioned you cant get silent only few macro builds

Yup that is my ideal option. I would like to try your guy for 5k. but obviously i need to make sure its not scam and all. also if there is a way to do contract on HF because that is safe haha.

Also if you know a good macro file crypter for \$150, let me know, i need to make one asap.

Silent DOC or PDF can cost up to a million. You cannot pay just \$1000 for it. If some people tell you it costs only \$1000, they are going to scam you!

Finally some one understands it very well, I am shocked I see people looking for PDF and some for

JPEG exploits ?

Macros will be no more @ Jun... Silent exploits works for Patched office versions means 0Day they won't be for a couple of k's posted in public...

1 click exploits can be. and 0 click but works for unpatched office versions ONLY of course not for 2019 + 365 office versions..
