Thread: [Giving 5 Premium Crypts Which Bypass Defender Runtime/Scantime & survives Restart](#)

nCoXo - May 30, 2021, 7:28 am

Hello Hackforms members,

From past several weeks I have been working on a very simple and basic crypter with an aim to bypass most widely used AV runtime & scantime as that's the major work of Crypter. As of now its very simple crypter with option to add startup and crypt And its almost ready to be deployed.

- Currently it only works with .net rat and have been tested with async and quasar rat only.
- Tested with defender and it bypass Runtime & Scantime and also survives system restart which most of crypter fail.
- I am giving 5 Crypts to reputed and experienced members, in return I would appreciate basic feedback on the crypts.
- Users with Multiple AV in there Vmware to test the Crypts will be given first Priority.

So what are you waiting for, Post below with which AV can you help test and I will select users who suits the best and contact them over PM.

Furiosa - May 30, 2021, 4:28 pm

i can help with : avast / avira / bitdeffender

rat that i can test its : bitrat

i give you client, crypt it and send it back. then i can check what happens.

like I said on my thread, Currently it only works with .net rat likes Async and Quasar Rat, if you want, we can test with these rats, I am sure you will enjoy the runtime FUD.

Those crypts most likely not bypass runtime. Especially with those open source rats. Don't waste your time pal.

from my Test I already bypassed Async rat with defender and it also survived the restart, If you want I can give you a Crypt to test.

got it mate, but the problem it is open source rats, like quasar/async are outdated. if you wanna make money you need to focus on paid rats because they get updated and also because of futures...

that's my opinion..now you know better

Stellen Sie TT - May 30, 2021, 11:39 pm

With .Net RATs, it can't fully bypass at Runtime.

Yes I am working on it and soon it will be working with native rats.

BTW if you want updated version of opensource rat then, they are also available.

You can send me your contact info and we can talk more.

as of now I have tested with async and quasar rat.

theblazinghood123 - June 1, 2021, 6:08 am

I wanna test against windows defender and kaspersky while using venom

I am not really a fan of Venom rat but if you want to use that rat then I dont mind testing it for you.

Contact me with your contact info and we can get this done.

you should use rat like async if you looking for better runtime Detections.

bombastic509 - June 12, 2021, 11:04 am

sounds amazing

I have always wanted smthn to bypass defender or even disables it

unlike other shitty overrated stuff out there

I don't understand why you say that it can't work with .NET RATs, what's special about .NET RATs?

hazbot77 - June 12, 2021, 7:58 pm

.NET RATs, what's special about .NET RATs?

OP said it does work with .net rats.

However it doesn't work with native rats yet.

The difference is .net (in this case c#) and native are different languages, thus different crypting methods are used for each.
