Thread: [New MMO Combines DeFi and Gaming - Play to Earn](#)

Cthulhu - May 31, 2021, 8:39 am

What is Farsite?

Farsite is a blockchain-powered MMO game with elements of real-time strategy. The game's economy uses aspects of decentralized finance on the Ethereum 2.0 blockchain. Players can take on all kinds of roles to be part of a bigger intergalactic economy. Every item in the game is made by players, using resources that have also been acquired by players.

Players could be a hauler, a complete contracts by moving goods between space stations. They could also be a miner, gathering resources, or a manufacturer who creates tools and items. The universe of Farsite also offers space for governance over stars, mercenaries, pirates, politicians and of course traders.

To produce something, you'd need a blueprint, components, a base on a planet and Credits to pay for services. The blueprints you can buy, borrow, or find, while components are made from resources found on planets. All items in the game are owned by players. Establish a base on a Planet in a hunt for rare materials to craft powerful Ships and Modules, trade on the open market, fight for loot and honor to govern the entire Constellation!
