Need config.json Configurations Of xmrig-proxy for nanopool

Thanks in advance

FooF - June 2, 2021, 9:55 am

This is not the right place to ask for this.

Thanks in advance

Yeah, not the right place. However, welcome to the forum [Real_Zeus](#)

This is set to use 50% CPU. The % you use has to be based around the number of cores your CPU has. It cannot use partial cores. So an 8 core CPU cannot be set to 20%. Also don't forget to change your wallet address as well as the mining URL.

The line you'd need to change is "max-threads-hint": 50" line.

```
Code {
  "api": {
    "id": null,
    "worker-id": null
  },
  "http": {
    "enabled": false,
