Thread: [Coder to code a simple application \[Paying 10\\$ LTC\]](#)

Flaxman - June 3, 2021, 11:53 am

Hi HF! I need a code to open 2 applications in the same folder. Both files will be in a sub-folder called "Resources" and in the parent folder there should be the coded tool to execute both these files inside the sub-folder.

Is there someone who can help me with this?

It should work on all pc's so if the path name is different like pc's user is guest instead of admin it should still work. (For example C:/User/Desktop and C:/Admin/Desktop

And it should also work if someone were to open this folder using winrar (or something else, in case the folder were zipped).

Please contact me via PM and leave me your contact info or just contact me via PM.

I could pay up to 10\$ for this, if it works properly. It should be done within 48H latest.

Edit: It should be a simple launcher that should open 2 .exe files in a sub folder called Resources.

Yes of course this can be done. However your not specifying what the 2 applications need to do.

Unless i missed it???? Feel free to drop me a pm or convo. Also what language are you wanting it in or does it not matter??

I want an Exe file that opens 2 files in a subfolder called "Resources". The 2 files should be 2 exe files. It should just simply open those 2 files.

Language does not matter as long as it is an exe file. It should work like a launcher.

Is it "chrome.exe" or "my-custom-program.exe"? Just leaving it at "i want an exe opened" doesn't tell us what .exe to open.

If you're wanting to open every .exe in that directory, that's not recommended and is an easy way for someone to slip malware into a machine and trick the user into running it themselves.

I was thinking of asking that later on if you were able to do it. Names of the 2 exe files should be "Crypto Market.exe" and "Update.exe"

Yes of course it can be done without a problem, but my question to you is are you wanting them to be downloaded or added as a resource to the exe file?
