Thread: [\[FREE TOOL\] Windows 10 Digital License Generator \(Not KMS\)](#)

raginize - June 4, 2021, 4:15 pm

Tool activates Windows 10 permanently and it doesn't install any files in your system.

It's not KMS (I don't use KMS because it creates scheduled tasks and repeats activation monthly).

I'm using this tool and recommending it to my friends, so i decided to share it with you too (Because of this community's friendly atmosphere I see all of you as my friends ?).

I'm not coder of tool but I'm sharing it because i think that's useful.

=====

Run the W10_Digital_Licence_Generator.cmd

And activate Windows 10 permanently.

- Almost all Windows 10 versions are supported except windows 10 1507 and server.
- This activator does not install any files in your system.
- Windows update must be enabled at the time of activation
- Internet connection is required for instant activation, but if you're running it offline then the system will auto-activate at the next online contact.
- Use of VPN, privacy and antispay tools may cause problems in successful activation.
- Unless hardware is changed, the system will auto activate the retail version of Windows 10 upon windows reinstallation, but if windows 10 VL version is used in that case you'll need to insert its product key in settings activation page to

regain activation upon windows reinstall.

=====

For Making Preactivated Windows 10 iso

- Use Poweriso software to open your windows 10 iso.

Now copy the \$OEM\$ folder from here and paste it in sources folder of the iso. The directory will appear like this

iso:\sources\\$OEM\$ Now click the option save as in poweriso.

Also, one time activation is enough. It makes an OEM activation for your pc, i guess. Because I've reinstalled windows for a few times and i replaced my HDD with SSD but still the activation exists.

I'm just cautious when it comes to false-positive results in Virustotal scans.

I know that most of the activators are false-positive, but I can't test your method until I see my client again.

Thank you for the PM, including screenshots and all. Appreciate it!

It's available open-source here:

<https://github.com/TinToSer/WIN10-Activation>

It basically uses CMD to activate your OS.

You can also google "activate windows 10 cmd" and click the first website, which will guide you through the steps.

(Jan 27, 2022 06:49 AM)Silkroad Wrote: [\[CITE\]](#) It's available open-source here:
<https://github.com/TinToSer/WIN10-Activation>

It basically uses CMD to activate your OS.

You can also google "activate windows 10 cmd" and click the first website, which will guide you through the steps. Yeah it is something like that but i am not sure the cmd method is valid after deleting os, but this method works well.
