Thread: [hidden audio recorder \[paying\]](#)

Unixroot™ - June 9, 2021, 8:36 am

I want an application that keeps recording audio of client in background and keeps uploading on server or whatever thats easy every 5 mins audio clips anything you suggest? I also want this feature that drops another file, and whenever I wish I can uninstall the program.

please quote me.

thanks!

Mark2022 - June 9, 2021, 9:37 am

this is something interesting, Its like a new concept of logger.

This isn't a good idea for two reasons:

You'd be generating gigabytes a day.

You'd have to manually go through and listen to each file if you want to extract information from the recordings.

True, but the clients device is on for 1-2 hours only twice a day

Thats why I said in parts because he will randomly shutdown, I am using a rat it records locally and then downloads when stopped but I need to manually stop and start every 4-5 min and it takes time in between so I lose audio, if he shuts down I got get any data.

Only record when there is high amount of volume.

Unixroot™ - June 10, 2021, 10:40 pm

Nice suggestions, but I want this application to be done lol

Scapula™ - June 11, 2021, 7:10 am

You can use [SpeechRecognitionEngine](#) class in .NET and start recording only when some words are recognized.

SIM-297877 - August 12, 2021, 10:12 am

This is easy lookup the mciSendString API of winmm.dll . You can call it to record and then have a timer to wait before ending the recording. Then a simple upload.

Still need this pm me your discord, i can code you an app.

Allready coded this app, pm in convo if you interested. It records for 5 min then send to mail and so on.

you can disable it by simply changing your sending mail password it crashes.
