Thread: [POSSIBLE H4CK TO BYPASS ADMINISTRATIVE PERMISSION??](#)

**\_R4YN3\_** - June 15, 2021, 9:09 am

Hello,

Hope all is well. So, currently I am operating under ridiculous(<---Understatement) amounts of Admin(My Dad) restrictions. Is there anyone that could assist me with this issue?? Just to bring you up to speed, here are some methods I've used multiple times and while some got me closer than others, in the end none have been able to spring me free from this cyber prison I've been doing time in?. Examples:< icacis >(this one was next to the best of them all but still failed), < icacis foldername /Grant Everyone:F / Q/ C/ T / >( This one was successful yet at the same time "Access Denied") I wont list them but Ive tried them all just about. < ipconfig >, < SFC /scannow > < taskkill >, < AT >, < bootcfg >,< CHMOD >, < msconfig > Tried H4CK1N6 using < NETBIOS Commands >, < bitsadmin > ( <--Really liked that one), < BCDEDIT >, < certutil > ( <--Badass Command there but still fail), etc I'm sure you all get the point,lol But seriously, I need help dude and fast as possible. So, any H4CK3R5 out there willing to help out a fellow teammate, I'll return the favor anyway I can!

Thank You

-R4YN3\[UNKNOWN\_U53R]

Huh, have you tried flashing the SSD and booting a new OS? you can also boot from USB if you have a USB port.

**\_R4YN3\_** - June 15, 2021, 9:19 am

I haven't tried that but I am definety going to do so now. Would you be able to provide me with any steps on how to properly do that? I'm sure I can just search the net,lol Just checking if theres a quicker way to go about this. Thanks for the quick reply btw!

why is your dad montoring you? Do you own your own computer? are you old enough to move out. Even if you reinstall an OS he will just put the restrictions back on.

Doc - June 16, 2021, 5:38 pm

All ipconfig does is tell you information about your network adapter configurations... But, as you said, you're a hacker, so you must've already known that.

Why is he monitoring me I believe is what you meant..And Well, I assume for the same reason he monitors anyone else here or on his property. Its his house sooo?. Am I old enough to move out? Do I own my own computer??...(Sigh) Dude....Why are you assuming irrelevant things? Why are you assuming irrelevant things online about a person you know nothing about?? Instead of simply answering the question ORR simply NOT answering the question like a normal person??

That is correct. I did know that... Allow me to briefly explain. At that time, I was logged in as an User with Administrative rights.

I had a batch script in Windows7 to update an hosts file that failed. When I ran the script listed below, with "Run as administrator" option I got "access denied". 0 files copied when executing this part of the script:

```
or /f "tokens=1-2 delims=:" %%a in ('ipconfig^|find "IPv4") do set ip=%%b
set ip=%ip:~1%
```

```
REM create changing part of hosts file...
if exist %temp%\temp.txt del %temp%\temp.txt
echo %ip% myproxy >> %temp%\temp.txt
```

```
REM check this...
set hostpath=C:\WINDOWS\system32\drivers\etc
```

```
REM add static part of hosts file
type "%hostpath%\hosts-static" >> %temp%\temp.txt
```

```
REM replace hosts file
copy /y %temp%\temp.txt "%hostpath%\hosts"
```

```
ipconfig /flushdns
netsh interface ip delete arpcache
pause
```

When I opened a cmd shell as "Administrator" and then ran the script from there everything worked fine, but there was no way of running it directly by double-clicking on the file (or its link).

Later I was able to solve this issue by using ICACLS. ICACLS allows you to modify access control lists (ACLs) to bypass access denied errors. I ran the following command:

```
ICACLS C:\path\to\batch\file\directory\ /C
the parameter /C tells the batch file to bypass access denied errors.
```

However, that was then and this is now.

Now, the method I used then isn't giving me the same results. So I figured an "Hacker forum" would be a great location to place a question about Hacking. Surely I were to obtain some useful knowledge, I thought to myself. At the very least, informative coherent conversation was likely to occur.

Sadly thus far, the only conversation I've been presented with is that of which hasn't a single thing to do with hacking and I've only run into lame dumb ass's who think they're clever or funny or something, idk. With all these dry-ass attempts at roasting...Yawn.....??

Try not to be so negative to others on here OP, your forgetting that we have no obligation to you at all for helping out.

Suggestions have been made.. i.e. boot from usb.

IMO just talk to your dad and try to show him you know what you are doing.

I am trying dude . I only fire when fired upon. I would never just attack anyone. Verbally or physically. Thats not what I'm about at all. But I don't tolerate bullies. Perhaps, we all got off to a bad start. I'll retract my previous comment. It's been a long day man

i get that just try not to forget that no one on here owes you anything, your not paying and you dont have a good reputation so people wont really help you (maybe a lil bit).

Hating only makes things worse ? hope you can find your peace after this long day you had!
