That is exactly why the trial is being offered to people so they can see it, test it through their own eyes.

The indicator is based on tradingview. You need an account on the website. The script is hosted and approved by their team. Which is the largest platform.

Well it predicted the corona dump. for most of the pairs I was following. Same with stocks. We have been developing this for moths if not years. Also been using it in our private group for quite some time now.

Currency is relative, what is cheap to us is expensive to others. If you pay \$1 for something that doesn't work, it's a waste of money.

For now, you need to manually place the bets on binance using the signals on tradingview. But if you know your profit % you can automate based on Profit % using alertatron etc. We are testing the auto stoploss aswell and should be released soon, that can be automated completely.

Stanley - June 30, 2021, 5:03 am

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

Helidek - July 5, 2021, 10:20 pm

Looks like many other free scripts on TradingView. waiting for reviews because this seems nothing special.

The rates of alerts on your screenshots is bad. most of the trades took there would result in a bad trade.

alerts on sell and then immediately on buy... I mean there's nothing special here you can find many scripts like that on TW.

I suggest you make your thread better because this isn't selling.

A lot of people have bought it from HF. We are giving away trial for the same reason. The buy and sell indications are not bad. You just haven't read the manual yet. You are supposed to skip some signals and take some, and they are mentioned in the manual itself.

If there are free indicators then I suggest you to go use them and make money instead of posting your assumptions here.

Using a non retarded risk management strategy you would need a portfolio upward of 20k to be looking anywhere close to 1.6k a day in returns. Even then you would need to have several trades open simultaneously and that becomes problematic for various reasons. 1.6k with a 20k port using a good risk managment strategy per week is more realistic during a bull cycle which we aren't in.

I haven't tested the actual indicator but the numbers he is throwing out in relation to the amount that can be made per day are unrealistic unless you have a very sizeable portfolio.

Thank you for your purchase! , do leave a feedback for the same !

SIM-4791795 - July 9, 2021, 5:15 pm

I purchased a month of automation for \$80/mo.

You have to pay an additional \$49.99 to use the automation software which is not directly linked with OP.

I contacted OP on Telegram and had him remote control into my PC to setup my automation since I was too illiterate to.

Everything is setup and running, will give everyone an update in a week.

I'm using \$2000 balance with 3x leverage.

Edit: Final verdict;

I personally would not recommend this indicator. I've been running it for 5 days with OP setting it up and have you hear it, lost money everyday.

I've messaged OP a few times and it takes a while for him to respond, well he hasn't responded last.

What is the point of the indicator if it does long And short and fails regardless? He set me up with the 2 minute timeframe which meant I had to pay for trading view subscription too but now looking through this thread he's running it on 15 min.

Anyways maybe you need to be an advanced trader to use this indicator but it's not recommended for the beginner like me that has no idea how it works and wanted an automated way to earn.

How are we supposed to know that a green buy indicator means to short and not long?

Typically indicators use buy as a long signal and sell as a short with the colors to match...

Or does your indicator just tell alert you on what position to take without telling you when to TP?

People who have taken the trial would know that the indicator tells everything. It also allows you to set your own TP and SL .

Also, we have another fully automation capable version ready and is being tested by lot of people on HF.

gotcha .. what time frames work best with this? Good luck with sales, I'm a fan of using EMA clouds myself, might give this a try.

Also not sure if it was asked, but does it repaint?

The automated one does not repaint. You can configure and test strategy as per your own preference for example: BTC its working great on 1min, DOT on 5min. ETH on 8 min and so on.
