Thread: [Android | Camera Access](#)

HardStoN - July 1, 2021, 10:17 am

Is there any known exploits that can be used to use user camera/mic without permissions or even with permissions but through background and not only foreground?

Thank you

turrach - July 3, 2021, 6:13 am

scam. do not trust this random monkey

Hi,

Meterpreters can do this. It's built right into the framework. It's the payload native to Metasploit -- the APK iteration is the easiest to use imo. Also the easiest to make persistent, given you can bind it to a legitimate template app.

Personally I use this in Watering Hole Attacks with some simple social engineering.

Link to documentation on MSF payload creation here:

<https://www.offensive-security.com/metasploit-unleashed/msfvenom/>

Cheers!

Actually this feature doesn't work for me at least on the latest android version.
Are u sure this is working for you?

Hi,

The cam snap feature worked on me maybe, 4 years ago? I haven't tried it again lately. When it comes to APKs, my use-case tends to just be data exfiltration.

It's possible that they've plugged this feature as part of a patch.

Cheers!
