Thread: [My predictions for Bitcoin for the next 4 days](#)

SIM-3867235 - July 10, 2021, 9:07 am

Hello everyone, I am testing out my Keras model for Bitcoin price forecasting. These are my current predictions. Not financial advice.

2021-07-10 to 2021-07-11 Market direction: DOWN

2021-07-11 to 2021-07-12 Market direction UP

2021-07-12 to 2021-07-13 Market direction DOWN

Let's see if they are accurate! :)

Fountain Of Youth - July 10, 2021, 11:39 am

Smart people are buying the dips

SA777OSHI - July 10, 2021, 12:18 pm

Market is so boring that people is making threads of price predictions for a range of 2k, Nevermind now you edited the thread and it only shows the direction it will go for the next 3 days without price prediction? Ok

Recon12345 - July 10, 2021, 12:49 pm

Did ya get your crystal ball from Costco?

.Infinity. - July 10, 2021, 7:27 pm

Wow, you expect it to go down, and then up, and then down? That's insane bro you should start a group.

m8than - July 10, 2021, 7:31 pm

now train your keras model on weekly basiss

SIM-3867235 - July 11, 2021, 8:20 am

(Jul 10, 2021 12:18 PM)SA777OSHI Wrote: [\[CITE\]](#) Market is so boring that people is making threads of price predictions for a range of 2k,

That's not what I'm out for. I engage in a lot of futures high-leverage trading where knowing price movements in a 2k range results in a higher change of making a good trade.

(Jul 10, 2021 07:31 PM)m8than Wrote: [\[CITE\]](#) now train your keras model on weekly basiss
That is the idea :)

(Jul 10, 2021 07:27 PM).Infinity. Wrote: [\[CITE\]](#) Wow, you expect it to go down, and then up, and then down? That's insane bro you should start a group.

LOL, its about knowing when the market changes direction that is important.

T0Bi - July 11, 2021, 9:16 am

Why did you remove your price targets?

shreder - July 11, 2021, 9:29 am

7-10 and 7-11 market up rip lets see next one

SIM-3867235 - July 11, 2021, 2:47 pm

(Jul 11, 2021 09:29 AM)shreder Wrote: [\[CITE\]](#) 7-10 and 7-11 market up rip lets see next one

So far on the 1hr chart the predictions have been correct.

(Jul 11, 2021 09:16 AM)T0Bi Wrote: [\[CITE\]](#) Why did you remove your price targets?

Because my model is still very unstable and after three more consecutive tests after posting I got different values but same market directions. Which so far, tells me that market direction is the most accurate.

Blue Eye Samurai - July 11, 2021, 3:03 pm

What am I even looking at.

m8than - July 11, 2021, 9:55 pm

(Jul 11, 2021 02:47 PM)waytoosplashy Wrote: [\[CITE\]](#)

This is called confirmation bias. Your model is probably correct by mostly luck but you want to believe it actually works even though it doesn't work for the task you set it (predicting prices)

SIM-3867235 - July 12, 2021, 3:33 am

(Jul 11, 2021 09:55 PM)m8than Wrote: [\[CITE\]](#) This is called confirmation bias. Your model is probably correct by mostly luck but you want to believe it actually works even though it doesn't work for the task you set it (predicting prices)

No this is called LSTM Time-series machine learning where a computer learns to predict point in a time-series sequence like price movement. I have revised the model and will add new predictions soon.

(Jul 11, 2021 09:55 PM)m8than Wrote: [\[CITE\]](#) This is called confirmation bias. Your model is probably correct by mostly luck but you want to believe it actually works even though it doesn't work for the task you set it (predicting prices)

The model results in a 60% accuracy of replicating bitcoin movement. You dont 'believe' anything when training a model. You train it and look at the results.

Update

The original predictions were:

2021-07-10 to 2021-07-11 Market direction: DOWN

2021-07-11 to 2021-07-12 Market direction UP

2021-07-12 to 2021-07-13 Market direction DOWN

Between 2021-07-10 and 2021-07-11 the market dropped 3.7%.

Between 2021-07-11 and 2021-07-12 the market went 3.6% bullish.

Between 2021-07-12 and creation of post the market is down 4.9%.

In conclusion the model has been able to predict market direction but there is still uncertainty whether this was a coincidence or not.

New Predictions

2021-07-13 to 2021-07-14 DOWN

2021-07-14 to 2021-07-15 UP

m8than - July 12, 2021, 5:18 pm

I know what it's called. I'm telling you what your brain is doing lol

SIM-3867235 - July 12, 2021, 6:17 pm

(Jul 12, 2021 05:18 PM)m8than Wrote: [\[CITE\]](#) I know what it's called. I'm telling you what your brain is doing lol

Its not confirmation bias when the predictions represented the majority of the market movements.

(Jul 12, 2021 05:33 PM)Focus Broken Wrote: [\[CITE\]](#) Well done! To compare this with coincidence, the chance of guessing this outcome correctly at random is 12.5%.

Thanks man, I've been working on this since August 2020. Even though the model's simulated accuracy is high, real world accuracy tends to decrease. I will be doing this for a couple of weeks until it would be profitable to invest in accordance to predictions.

Grimeta - July 12, 2021, 6:40 pm

(Jul 12, 2021 03:33 AM)waytoosplashy Wrote: [\[CITE\]](#) New Predictions

2021-07-13 and 2021-07-14 DOWN

2021-07-14 and 2021-07-15 UP

So 14 is up or down? ?

SIM-3867235 - July 12, 2021, 6:50 pm

(Jul 12, 2021 06:40 PM)Grimeta Wrote: [\[CITE\]](#) So 14 is up or down? ?
Its between 13 and 14 as well as 14 to 15. Predictions are for 24 hour periods.

m8than - July 12, 2021, 9:27 pm

What's backtesting results like with this?

Also what inputs are you using for your model?

Don Vito Corleone - July 12, 2021, 9:47 pm

I like that you're sharing your way to training your model with us so we can see how your model improves. You state that it's not financial advice and that you just want to see whether the predictions are accurate or not, there's nothing wrong with that. I'm glad we can follow you through this process and I'm sure that if you had posted this in the Python sub forum people would've replied differently.

This sub forum can be a bit harsh. A lot of it has to do with the history of low quality posts from when people come here during crypto hype. Looking at the replies on this thread it looks like people think you're saying saying that you have a crystal ball, but that's not the case here.

Grimeta - July 14, 2021, 9:20 am

Your predictions are right on point so far ? please post more ?

SIM-3867235 - July 14, 2021, 9:59 am

(Jul 12, 2021 09:27 PM)m8than Wrote: [\[CITE\]](#) What's backtesting results like with this?

Also what inputs are you using for your model?

The model reaches a validation loss of around 3-4% and same goes for training loss. The inputs of the model is something that I cannot disclose.

Grim - July 14, 2021, 10:00 am

Yeah I understand. The predictions that the model makes can never be taken as financial advice since there is always a slight chance that the prediction fails. The model, at this stage cannot predict a sudden dump for example. I think the Python subforum would not be fit for this thread since I am not that open to sharing the source code for this model. It's just a thread where you can follow along on the progress.

(Jul 14, 2021 09:20 AM)Grimeta Wrote: [\[CITE\]](#) Your predictions are right on point so far ? please post more ?

Thanks man! Yes, I am preparing new predictions for the next 2 days. I am very happy with the results so far. I am currently improving the model so that I will be able to disclose price predictions.

Results

Originally the predictions were:

2021-07-13 to 2021-07-14 DOWN

2021-07-14 to 2021-07-15 UP

Actual price movements were:

2021-07-13 to 2021-07-14 DOWN 5.3%

2021-07-14 to now UP 3.88%

This makes the second round of predictions correct. I might finish the updated version to give a bigger outlook as well as on a longer timespan. If not, you can expect new predictions for the coming two days in a couple of hours.

Don Vito Corleone - July 14, 2021, 12:56 pm

He hasn't shared anything - I'm guessing he's just using some kind of Keras LSTM model or something that doesn't consider the longer time-frame momentum trades that have been the real moneymakers. There simply isn't enough testing data that reflects other changes and if you modeled waves off historical waves, there's an underlying assumption that there are an infinite number of people that can buy BTC, which obviously isn't the case.

SIM-3867235 - July 15, 2021, 7:20 am

"longer time-frame momentum trades that have been the real moneymakers" Please read the entire thread before "guessing". The motive of making a model that is able to predict market direction on a day-to-day basis is for traders that engage in futures/options and leverage trading.

(Jul 14, 2021 10:35 PM)Joca300 Wrote: [\[CITE\]](#) Great post, had the same prospect for the markets, so yeah, money was made, short ratio has also declined, lets make some satoshis guys

Thanks for your kind remarks. I will be trying out futures trading on these predictions for the next round of predictions.

luv. - July 15, 2021, 2:06 pm

Mercury is in cancer so I can only guess that BTC will hit \$27k within a week

(Jul 16, 2021 10:09 AM)Joca300 Wrote: [\[CITE\]](#) Actually because of your lead, i took off 25% of the margin i had, just to be safe, any ideas for tomorrow?

Risk management is always key. Yes, new predictions will be released in a couple of hours.

Originally the predictions were:

2021-07-15 to 2021-07-16 DOWN

2021-07-16 to 2021-07-17 UP (almost neutral movement)

Actual movements:

2021-07-15 to 2021-07-16 Bitcoin price went down 3.9%

2021-07-16 to 2021-07-17 now (The strength of the upward movement prediction was very low and thus I imagined it would be a neutral movement. I was somewhat skeptical about this prediction but it turns out that this neutral movement was reflected on the charts today as well which is great!). At 2021-07-16 00:00 Bitcoins price closed at 31750 and dropped around 2.3% at 12:00 2021-07-16. Shortly after it started to rise 3.5% followed by another 0.5% drop which in comparison to the open price at 2021-07-16 00:00 is why we can understand why the model predicted a neutral movement, since it has so far returned to its open price.

This sums up this round of predictions and the model was again, correct.

New Predictions

2021-07-17 00:00:00 - 2021-07-18 00:00:00 Market movement: DOWN | Strength: 315.43266732944176

2021-07-18 00:00:00 - 2021-07-19 00:00:00 Market movement: UP | Strength: 100.8302676868625

What is Strength?

Spoiler ([Click to View](#))

It is a measurement of the movement strength that the model has predicted. There are no clear definitions on what defines a weak signal and a strong signal although from my experience I use these definitions:

Strength > 300: Moderate strength

Strength < 150: Low strength (be very careful with leveraged trades)

Strength < 50: No strength (unclear market, abstain from trading)

First time doing a trade in accordance with the models prediction ?

xPlutus - July 20, 2021, 6:17 am

Hey man, what does your glass sphere see for the next few days? I think if the 29k level can't hold we'll see ~27.5k by the end of this week.

shreder - July 20, 2021, 1:40 pm

From information thus far, OP has scored 5 out of 9 calls correctly. There are two calls that I marked invalid despite his overall call being correct for that day. OP does high-leverage trading meaning he would have likely been liquidated where I circled in orange, meaning despite the overall call being potentially correct for that day, you would have been liquidated anyway so it's a fail. The overall accuracy of his calls to the publicly available calls = 55.55% accuracy.

SIM-3867235 - July 20, 2021, 1:48 pm

When you make such bold claims you have to be more specific. What dates were incorrect. What do you mean by incorrect? Have you read the entire thread of what the predictions actually predict? And finally, it is impossible for you to know if I ever was liquidated since you do not know the balance of my Binance wallet. Stop wasting your time.

shreder - July 20, 2021, 1:55 pm

I have received very positive feedback on thread and both in private messages so your fright of someone getting liquidated can dissipate. We would certainly hear from them. Yes, after each call I reviewed the predictions vs. actual movements and have not noted any major faults in the predictions. If someone were to trade futures they would still need to practice risk management which involves hedging against spontaneous large volume transactions to avoid liquidation. The wicks you circled are examples of those but they cannot be treated as "market movement".

Final verdict 55.55% accuracy

All of this is from YOU. Don't try to call me out so you can sell your little ass service on the marketplace for \$4.99.

Oh dear, you do not know how futures work?

Let's dissect this piece by piece.

"Liquidation Image 1: 07-10 to 2021-07-11 you said DOWN and it spiked UP liquidating your ass before day ended".

Open price: 33831

Close price: 33624

0.6% down. That would be the worst percentage that you couldve obtained following the calls blindly. If position would have been exited before the bullish movement then we can count with 1.6% down.

"liquidating your ass before day ended" I dont know if you are trolling or not. Showing a screenshot of some retarded website. Dont you understand that liquidation price depends on your futures balance.

Here is how you use Binance futures. Hope you dont use anything else when calculating your liquidation price xD

"Liquidation Image 2: 2021-07-16 to 2021-07-17 you said UP and it spiked DOWN liquidating your

ass before day ended"

I said UP but I mentioned that it would also be neutral movement and to be very careful with trades that day. Which was exactly what happened.

During that day BTC went bearish and closed very close to the opening price that day.

I always said that you cannot follow these calls blindly and that you still need to practice risk management as this is only an additional tool for trading.

Yes but what you dont understand is that liquidation price depends on your wallet your maintenance margin everywhere.

Well yeah now you changed your tone. You posted an example of how a beginner futures trader can get liquidated. This can happen any time but not because the call is flawed but because the trader was uneducated and did not have a good maintenance margin. I understand your point next time I'll make something similar I'll include a big disclaimer on how to use the data and what to watch out for.

The 100% accuracy was based on the real examples but you are right, 100% accuracy is wrong. Looked at your video but I noticed in your code that it doesnt seem that you dont normalize your data or am I wrong?

(Jul 20, 2021 04:50 PM)Hewlett Packard Wrote: [\[CITE\]](#) Instead of daily calls, can you do hourly trend and see how accurate your model is? I don't think you have enough test data to call 100% accuracy. I did this a while back and could help you out too! <https://youtu.be/EqWm8A-dRYg>

For now the model is optimized for predictions on the daily chart. It will take some months to create an applicable model for hourly chart.

You would not have been liquidated if you listened to have your liquidation price above the resistance which was 31808-32k

(Jul 21, 2021 03:09 AM)Focus Broken Wrote: [\[CITE\]](#) Don't bother flashing your proven record of real time success to [shreder](#) because he literally can't distinguish a winning trade from a losing trade even after the results occur: One time he even spent months promoting [my massive Nov 23rd-Nov 26th ETH short](#) in his own signature for FREE ? ?

Then I bullied [shreder](#) for his money again by shorting the ETH spike over 4k ?
LOL, alright thanks I will keep that in mind next time he replies.

The most likely reason for the sudden increase in price was the models weakness. Large transactions of USDT and USDC. Then there was a 3k BTC buy. These are things that the model cant predict. A good tool to use to detect large buys before they occur is to look at https://twitter.com/whale_alert

If any treasury mints USDT,USDC or HUSD or BUSD it means that demand for those stablecoins has increased and treasuries mint to keep the price stable. Consequently this means that interest for crypto increases and since Bitcoin being the most known currency is likely to be the pair the USDT gets exchanged for.

31808-32k was the resistance which means your liquidation price needs to be above 32k. Not within the resistance.
