I am looking for a software with similar capabilities like this which can spoof email addresses and send thousands of emails on a daily basis, let me know if there's a working software like this exists.

I mean, I would definitely be able to program this software within a few hours.

The question is really to make it avoid ending up in spam folders.

I'm not so sure about that part, and not really sure how many softwares out there actually goes around that issue.
