Indeed it cleans the tracers they put on your PC, But a spoofer on the other hand which is still a "Tool" Can indeed bypass a ban because it chnages your hardware ID's for the time being so they may have your original HWID's banned but since they are momentarily changed its a none issue.

When you are HWID banned, You would need a HWID spoofer AND a cleaner, You will still need to HWID spoof, But you need to clean as well

Yes you need a HWID spoofer AND a tracer cleaner or just one really good HWID spoofer.

Do you know a good HWID spoofer?

I have this one but I don't know what it's worth. Can you recommend one for cold war?
