Thread: [is it good to open source bots](#)

alizer0 - July 20, 2021, 5:50 am

i made a bot with almost complete sets of features: a uac bypass, critical process, decompiles and recompiles itself at runtime, logger, video recorder and everything i can think of, ive been using this for more than a year now and this has been of great use...now ive been thinking of open sourcing it,, should i?

xCrue - July 20, 2021, 5:51 am

Yes you should open source if you want to. I am sure many of us would appreciate some new malware to work with.

ah yes, thats good to hear

Elijah - July 20, 2021, 10:02 am

making open source is a good option, it helps other to learn from it.

onlyscams2 - July 20, 2021, 10:51 am

Some features if u open source will become useless in a matter of days. For example uac bypass if u open source it will be patched by Microsoft almost immediately.

x_x - July 20, 2021, 10:58 am

Yes and no, it will get skidded but it could also help someone else.

not really, the UAC bypass is just a port from an already open source project

<https://github.com/hfiref0x/UACME> that has been going on for a long time, microsoft doesnt even bother
