Thread: [Free Warzone permanent UAV](#)

Mutiny - July 22, 2021, 4:06 am

Hi all,

Here is a free tool I updated the offsets on and compiled It is currently undetected with NO shadowbans or permanent bans.

The .exe is in the .rar and if you do not trust me you can compile yourself it is from a release on UnknownCheats that needed to be updated

<https://www.unknowncheats.me/forum/call-of-duty-modern-warfare/461359-uav-modern-warfare.html>
!

Proof of it functioning and how to update offsets yourself:

[Video: https://www.youtube.com/watch?v=hboGXzbzu3c&ab_channel=JackMeoff]

(Video is unlisted as I am not greedy for views)

make sure to build and run the x64 version for it to function.

[Download \(click me\)](#)

To attach tool to game process OPEN GAME > OPEN TOOL > CLICK BACK ON GAME and keep repeating process till it says attached in GREEN then press on the UAV button.

UPDATED: <https://www.mediafire.com/file/hl8ct1cnipoa68a/Offsets+updated+++source.rar/file>

Includes source and compiled .exe if you don't trust it there is no obfuscation

RandomUser123 - August 10, 2021, 10:44 am

Is this safe? Anyone can confirm?

----- Edit -----

Apparently doesnt work, i coded a bit in vb.net and took a look to the code, in my small experience looks safe. Didn't use the precompiled .exe tho.

So...

Maybe safe, yet doesnt work.

It's stuck on "waiting for game..."

No don't use it offsets need to be updated + the dev for some reason sent the source code to activation so you'll be perma banned if you do update it. It's in C# by the way.

VB.net and c# are basically the same language, both .Net and both get translated to IL (intermediate language).

I may not be able to write in C# but i understand what's written since it has the same names, same functions just different scheme.

This..

This says enough.
