Thread: [Add Table MyCode](#)

Exalted - July 25, 2021, 2:56 am

I am in the process of writing a thread, and I want to include some tables.

I have attempted text tables in code blocks, but those, unfortunately, have a max-height. A Pastebin-embed could work, but those only embed in light mode. Then there's the option to embed an image, but I would much prefer it if the thread viewer could copy/paste data from the tables and that the content is searchable and indexable.

Thus, hereby my suggestion to add table support. Thank you.

[Here's an example implementation I found on MyBB by sarisisop.](#)

Configuration > Mycode > Add new mycode. You need to make 4

Table

Code `\[table\=(.*?)\](.*?)\[\/table\]`

Code `<table border="0" cellpadding="3" class="tborder" style="width:$1%;">$2</table>`

Table Header

Code `\[th\](.*?)\[\/th\]`

Code `<th class="tcat" align="middle"><strong>$1</strong></th>`

Table Row

Code `\[tr\](.*?)\[\/tr\]`

Code `<tr>$1</tr>`

Table Data

Code `\[td\](.*?)\[\/td\]`

Code `<td class="trow1" valign="top" align="center">$1</td>`

To use:

This gives the table

Code `[table=NAME] [\/table]`

This gives a row.

Code `[tr] [\/tr]`

This gives a header column

Code `[th] [\/th]`

This gives content

Code `[td] [\/td]`

Change NAME to suit.

Example:

```
Code [table=test]
[tr][th]Vegetable[/th][th]Meat[/th][tr]
[tr][td]Onion[/td][td]Beef[/td][tr]
[/table]
```

Just add more sections as needed.

Have fun.

Idea taken from other threads on this forum.

I personally suggest finding a way to do this without a table.

That is my last resort if this suggestion doesn't work out. Thanks for your reply!

I really don't want that mess of a code on the site.

I'd consider something like a way to embed Google Sheets maybe?

<https://www.groovypost.com/howto/embed-a-google-sheet-in-a-website/>

Would you find that helpful? The cool thing is that it's iframe'd and means you could update in real time your table.

That's something I can see working and will say yes to! It would be nice to have tables without having to go through hell to format them correctly.

frankdoalittle - July 27, 2021, 4:47 pm

would be fascinating to have that on the site correctly

Google sheets could be very useful , Going to follow this thread to see where it goes.
