Thread: [hVNC / hRDP nightmare](#)

3m1l1a - August 2, 2021, 2:17 pm

Ok I've spent entire days now, trying to achieve something that just works, to no avail.

I cannot afford to give someone hundreds of \$\$\$ for a product which isn't reliable like I've seen in so many posts.

I have been through almost every github, even japanese and russian ones, I have tried to compile everything I could find and I have tested so many solutions and cannot find anything THAT JUST WORKS LIKE IT'S SUPPOSED TO.

I'm looking for a Hidden VNC / Hidden Desktop that can be simply deployed through a RAT.

Does anybody here has a solution that can do that RELIABLY enough ? Even if it's code from 10 years ago, I don't care, as long as it works on the largest panel of Windows OS!

Thank you for taking time to read this.

hazbot77 - August 2, 2021, 4:48 pm

You can buy the hVNC within BitRAT.

Mate, no offense, I'm sure it works very well overall but I've seen many people complain about the hVNC feature being unstable, plus, I'd need to pay for the RAT AND the hVNC feature that's not included. I am aware of the more expensive prices of others, which is why I'm seeking an alternative solution.

None taken. I've seen some other hVNC's here if you're happy to pay a higher price - [Botnets and Botting](#)

SIM-297877 - August 2, 2021, 7:39 pm

A lot of the hVNC's on here will be clones from TinyNuke, The source is on Github. I know that BitRAT's is from TinyNuke as Krebs did a article on it Google BitRAT and you will find it.

Mark2022 - August 3, 2021, 12:56 pm

I have searched a lot in past but never found a free one :(

Where did you searched?

Mark2022 - August 3, 2021, 1:01 pm

(Aug 3, 2021 12:58 PM)Button5 Wrote: [\[CITE\]](#) Where did you searched?

HF, Google, Github and some other sites.

Your best bet is to look at tinynukes, and improve on it. Aka, code your own. Sadly if you want one for free, time is the price

thats a bitter truth :(

BlackCat0 - August 4, 2021, 11:27 pm

BitRAT have it
good one

Melted - August 11, 2021, 9:05 am

You may be interested in [S-400 RAT](#).

This RAT has stable hVNC, hRDP, and Hidden Browser capabilities (as well as much more).

Living Lavish - August 11, 2021, 10:32 am

HVNC exists and is very rare on this forum ngl. Its expensive for a fully working HVNC. I'm currently paying like \$3200/month?

cloudz4me - August 13, 2021, 4:04 pm

ehh id like to keep it private for now lol, but lets just say its limited to abt 10 ppl a month and has great REAL feautres.

First off it copies the ENTIRE windows user and desktop silently and makes a user mirroring it EXACTLY.

So this isn't just Hidden Browser but a full hidden vnc experience.

All desktop files are interactable as well as browsers with cookies, bookmarks, everything.

It's very cash money.

PigeonGod - August 19, 2021, 6:52 pm

S-400 is literally NJ RAT with more features, it's current version is a massive improvement yes, but the HVNC is literally the same as BitRAT, it was taken from TinyNuke. Don't suggest stuff if you don't know what you're talking about man.

Thank you for taking time to read this.

Basically every RAT that has HVNC today stole the code from a C++ Botnet called TinyNuke. The source was partially converted by Gigajew on GitHub.

Orcus RAT has HVNC but it's very buggy and doesn't work with modern browser versions etc. Also all Orcus versions are backdoored after the owner was arrested, it isn't safe to use anymore unless you want your door kicked in.

Honestly just gotta learn to code your own or finish the Gigajew version that's on GitHub

onlyscams2 - August 24, 2021, 8:30 am

Not deploying through a rat, but i can install hidden anydesk on bots. I guess i could automate it down the line if i wanted to.

Sounds fucking insane, I need some shit like that in my life. I've bought every one on here and they're all shit, do you know anywhere to go to find private ones?

gangbangjoe - October 16, 2021, 1:47 am

TinyNuke with modified reverse client for listener window size works, I've tried it.
