Thread: [Is there any RAT that works without Port Forwarding?](#)

Bad Bunny - August 2, 2021, 4:40 pm

Does a RAT can work without port forwarding or if there's any specific tool?

Grimxploit Official - August 3, 2021, 9:54 pm

no..all rat need port forward...use stealer that not need shit porting

chr1s_ - August 7, 2021, 4:56 am

actually there is a rat you can use without port forwarding

it is not exactly meant for ratting but it should work with a crypter

it is called webmonitor by revcode

ive only used their android rat and even though im having a few problems with it if you are looking to rat only pc's it should work

No, it's not possible for a simple reason. RAT's are (mostly) based on the TCP protocol and that require to listen on a dedicated port. If your port is not opened, no TCP request would pass your firewall.

If you need something without port forwarding, take a look on botnet's based on HTTP protocol (That also need port forwarding, but on port 80 that is opened by default on every linux servers). You can buy a small VPS and install a botnet on it.

PS: I know account OP is closed, but for futures newbies it can be usefull.

iam sorry man i dont know any rat that doesnt require port forwarding

what problem do u have why u cant portforward?

maby i can help!!!?

SIM-5061787 - August 9, 2021, 2:40 am

You don't need to port forward but you'd have to use an external program such as ngrok; You'd lose all your clients when you close the session. Every router/modem should allow portforwarding and you can do it easily as most of them have tutorials or are very straightforward.
