Thread: [How do I host scam websites without the host shutting me down?](#)

bax2dav - August 5, 2021, 9:39 pm

My only option to host is thru a home server, but my ISP doesnt allow web hosting, I tried using hosting platforms and virtual private machines like DigitalOcean but the all shut down my websites. Is there a service that doesnt care about the content that you host on there? Is my only option to get another ISP?

Depends what you're trying to host specifically lol.
