Thread: [Crypto information you wish you had sooner?](#)

Focus RS - August 6, 2021, 2:07 pm

Are there any information sources, websites or research that you wish you had sooner in your crypto career?

I ask this question as I am interested in reading and researching the topic more.

I ask this question as I am interested in reading and researching the topic more.

One tool that I find helps checking if a coin or token is a shill is [\[https://shill.watch/\]](https://shill.watch/) . It basically checks the number of posts and threads on 4chan and reddit and it can give you a idea of if a project is just being shilled. (I find this helps with tokens and Defi protocols that have their own token). I also wished that I bought a ledger or an hardware wallet sooner when dealing with smart contracts or using it for defi farming via metamask on bsc. If you are into trading then i would look into using a tool like trading view or quadency (a alternative that you can set up trading bots and smart orders for exchanges via API or make your own with python). And the most important thing to use is your common sense. If something is too good to be true, it likely is or has a catch as with most things. Stay away from shills and do your own research on investments and check your transactions carefully.

Anyways this is not financial advice.

Make good choices and good luck mate. :]

Think it was last year someone I know was developing a Defi program and was talking about how to

avoid shilled shitcoins with it.

Ya he said in the blog that he has had little time to work on the project cuz of quality of life issues and he added a friend to the project but still no updates to the site :/

Still remember when it was just a 4chan scrapper but now they have reddit also so that's neat.
